Glyceryl Trinitrate 1 mgml solution for infusion

The product is a clear and colourless solution.

For the full list of excipients, see section 6.1.

Suggestions for use: the solution contains glucose; this should be taken into account in the patient's needs (see also section 6.2).

Available evidence is inconclusive or inadequate for the following indications: 
- Acute bronchial asthma
- Snoring
- Acute respiratory distress syndrome (ARDS)
- Pneumothorax

7. OTHER INFORMATION

Varied routes of administration did not reveal any effect on fertility.
The following side effects have been reported:

- chest pain
- dizziness when standing up suddenly
- fast or irregular heart beat
- sleepiness
- dizziness, light-headedness

Your doctor will discuss these side effects with you and explain the risks and special management to minimise the risk of complications. Your doctor will also discuss with you the benefits of treatment with glyceryl trinitrate and whether the benefits outweigh the risks of taking the medicine. Although you may not get all of these side effects, you should be aware of them so you can report any unusual side effect to your doctor immediately.

4. POSSIBLE SIDE EFFECTS

Note: Some of these side effects may occur occasionally.

- Headache
- Light-headedness
- Dizziness
- Tachycardia
- Bradycardia
- Hypotension
- Syncope
- Fall in blood pressure ≤ 90 mmHg
- Increase in heart rate
- Low blood pressure
- Fatigue
- Sleepiness
- Diarrhoea
- Nausea
- Vomiting
- Migraine

- The dose depends on the condition. Your doctor will decide the correct dose and duration of therapy for you, while carefully monitoring the effects of the drug.
