1. What Sanomigran Tablets are and what they are used for

Sanomigran Tablets are available in two different strengths containing either 0.5 mg or 1.5 mg of the active ingredient, pizotifen.

Sanomigran Tablets are a migraine treatment. They may help to stop the effects of certain naturally occurring substances in your body called “serotonin”, “histamine” and “tryptamine” which are involved in causing some kinds of headache, including migraine.

Sanomigran Tablets have been prescribed for you by your doctor to help your migraine type headaches. If they are taken regularly they can help to prevent headaches or reduce the pain of cluster headaches, common and classical migraine. Sanomigran Tablets can stop some migraine attacks starting and help make other attacks less severe. They will not stop migraine attacks once they have started.

2. Things to consider before you start to take Sanomigran Tablets

Some people MUST NOT take Sanomigran Tablets. Talk to your doctor if:
- you think you may be allergic to pizotifen or to any of the other ingredients of Sanomigran Tablets. (These are listed at the end of the leaflet.)
- you are breast-feeding.
Sanomigran Tablets should not be given to children aged under 2.

You should also ask yourself these questions before taking Sanomigran Tablets:
- Do you have glaucoma (raised pressure in your eyes)?
- Do you ever have problems passing urine?
- Do you have kidney problems, especially kidney failure? (The medical term for this is renal failure.)
- Do you have liver problems? Sanomigran has been associated with abnormal results of liver function tests and possibly liver problems in a few patients. You may not notice any symptoms but if you notice yellowing of your skin or the whites of your eyes, abnormal darkening of the urine or unexplained nausea, vomiting and tiredness, tell your doctor straightaway. Your doctor may request blood tests to check and to monitor your liver function and may request that you stop the treatment if your liver problem is serious.
- Do you have epilepsy?
- Are you pregnant?
- Do you have an intolerance to some sugars? (The tablets contain a small amount of lactose and sucrose.)

If the answer to any of these questions is YES, tell your doctor or pharmacist because Sanomigran Tablets might not be the right medicine for you.

Are you taking other medicines?
- Remind your doctor if you are taking drugs called alpha- or beta-blockers because Sanomigran Tablets may affect the way they work.
- Anything that makes you sleepy may make you even sleepier if you are taking Sanomigran Tablets as well. This includes sleeping pills, sedatives and antihistamines such as cold and hayfever medicines. It also includes alcohol. It is best not to drink alcohol while you are taking Sanomigran Tablets.

Always tell your doctor about all the medicines you are taking. This means medicines you have bought yourself as well as medicines on prescription from your doctor.

Will there be any problems with driving or using machinery?
Some people may feel drowsy and/or dizzy while they are taking Sanomigran Tablets. If this happens, you should not drive or do anything that requires you to be alert (such as operate tools or machinery) until such problems clear.

3. How to take Sanomigran Tablets

The doctor will decide what dose of Sanomigran Tablets you should take. Always take the tablets exactly as your doctor has told you to. The dose will be on the pharmacist’s label. Check the label carefully. It should tell you how many tablets to take, and how often. If you are not sure, ask your doctor or pharmacist. Keep taking the tablets for as long as you have been told unless you have any problems. In that case, check with your doctor.

With Sanomigran Tablets, you do not wait for a migraine and then treat the pain. You take it regularly to stop your migraines even beginning or to make them less severe.

Adults
- The usual dose is 1.5 mg of pizotifen each day. This is one 1.5 mg tablet or three 0.5 mg tablets. You may have been told to take your tablets once a day or as three smaller doses.
- Do not take more than 3 mg in a single dose (two 1.5 mg tablets or six 0.5 mg tablets). Do not take more than 4.5 mg (three 1.5 mg tablets or nine 0.5 mg tablets) in a day.
Children (aged over 2 years)

- Children can take up to 1.5 mg of pizotifen each day. This is three 0.5 mg tablets. This is usually best given in two or three smaller doses.
- Do not use the 1.5 mg tablets for children. Do not give them more than 1 mg in a single dose. This is two 0.5 mg tablets.

For children over 2 who find it difficult to take tablets Sanomigran is also available as an elixir (syrup).

**Sanomigran Tablets and Elixir should not be given to children under 2 years of age.**

Taking Sanomigran Tablets

- Swallow the tablets whole. Have a drink with them if this helps you to swallow.
- If you take Sanomigran Tablets once a day, take them in the evening a few hours before you go to bed as any drowsiness will help you to sleep.
- If you take your tablets in two or three doses, spread them evenly through the day.

Carry on taking your Sanomigran Tablets even when you feel well. Your headaches may come back if you stop taking them. Do not stop taking them suddenly, or you may experience withdrawal symptoms, such as feeling anxious, shaking, insomnia, feeling sick and blackouts. Talk to your doctor if you want to stop taking your tablets.

**What if you forget to take a dose?**

If you forget to take your tablets, do not worry. If you normally take Sanomigran Tablets several times a day you should take the last dose you missed as soon as you remember. Do not take it if there is less than 4 hours before your next dose, but go back to your regular dosing schedule. Do not double doses or take more than your maximum daily dose.

If you normally take one tablet each day take the dose as soon as you remember. Take your next dose as usual. Do not take more than your maximum daily dose.

Tell your doctor if you keep forgetting to take your tablets.

**What if you take too many tablets?**

All tablets can be risky if you take too many. If you take too many Sanomigran Tablets at once, tell your doctor or hospital casualty department as soon as possible. Take your medicine pack with you so that people can see what you have taken.

**If you stop taking Sanomigran**

Do not change or stop the treatment without first asking your doctor. Your doctor may want you to reduce the dosage gradually before stopping completely. This is to prevent any worsening of your condition and reduce the risk of withdrawal symptoms such as depression, trembling, nausea, anxiety, generally feeling unwell, dizziness, sleep disorder and weight loss.
