Cetirizine Hayfever and Allergy Relief 10 mg Tablets

(Cetirizine hydrochloride)

1. WHAT CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS ARE AND WHAT THEY ARE USED FOR

Cetirizine hydrochloride is the active ingredient of Cetirizine Hayfever and Allergy Relief 10 mg Tablets. Cetirizine Hayfever and Allergy Relief 10 mg Tablets is an antiallergic medication.

In adults and children aged 6 years and above, Cetirizine Hayfever and Allergy Relief 10 mg Tablets are indicated:
- for the relief of symptoms of hay fever (seasonal allergic rhinitis) and allergies such as dust or pet allergies (perennial allergic rhinitis), such as sneezing, itchy, runny and blocked nose, red and watery eyes.
- for the relief of swelling, redness and itchiness of the skin (symptoms of chronic idiopathic urticaria, which is also known as chronic nettle rash).

2. WHAT YOU NEED TO KNOW BEFORE YOU TAKE CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS

Do not take Cetirizine Hayfever and Allergy Relief 10 mg Tablets:
- if you have a severe kidney disease (severe renal failure with creatinine clearance below 10 ml/min).
- if you are known to be allergic (hypersensitive) to the active substance of Cetirizine Hayfever and Allergy Relief 10 mg Tablets or any of the other ingredients of these tablets (these are listed below, in section 6 “Further information”).
- if you are known to be allergic (hypersensitive) to drugs from the pipemidazine family, for example buclizine, cyclizine, medolazine, levocetirizine.

Warnings and precautions
Check with your doctor before taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets:
- if you have problems with your kidneys.
- if you have predisposition factors of urinary retention (eg: spinal cord lesion, prostatic hyperplasia) as cetirizine increases the risk of urinary retention.
- if you suffer from epilepsy or are at risk of convulsions.

Take special care with Cetirizine Hayfever and Allergy Relief 10 mg Tablets
If you have kidney problems, please ask your doctor for advice; if necessary, you may have to take a lower dose. The new dose will be determined by your doctor.

If you are an epileptic patient or a patient at risk of convulsions, you should ask your doctor for advice.

Children
Do not give this medicine to children below the age of 6 years because the tablet formulation does not allow the necessary dose adjustments.

Other medicines and Cetirizine Hayfever and Allergy Relief 10 mg Tablets
Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription.

Due to the profile of cetirizine, no interactions with other drugs are expected.

Taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets with food and drink
Food does not noticeably affect the absorption of cetirizine.

No interactions having a noticeable impact have been observed between alcohol (at the blood level of 0.5 per millilitre corresponding to one glass of wine) and cetirizine used at the normal doses. However, as it is the case with all antihistamines, it is recommended to avoid consumption of alcohol while taking this medicine.

Pregnancy and breast-feeding
If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine.

Cetirizine Hayfever and Allergy Relief 10 mg Tablets should be avoided in pregnant women.

Accidental use of the drug by a pregnant woman should not produce any harmful effects on the foetus. Nevertheless, the medicine should only be administered if necessary and after medical advice.

Cetirizine passes into breast milk. Therefore, you should not take Cetirizine Hayfever and Allergy Relief 10 mg Tablets during breast-feeding unless you have contacted a doctor.

Allergy skin test
If you are going to have an allergy skin test stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets for three days before the test. This medicine may affect your allergy test results.

Driving and using machines
Clinical studies have produced no evidence of impaired attention, alertness and driving capabilities after taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets at the recommended dose.

If you intend to drive, operate machinery, or perform other tasks that need your full attention, you should not exceed the recommended dose and you should closely observe your response to the drug. If you are a sensitive patient, you may find that the simultaneous use of alcohol or other nervous depressant agents may additionally affect your attention and ability to react.

Cetirizine Hayfever and Allergy Relief 10 mg Tablets contains lactose
Cetirizine Hayfever and Allergy Relief 10 mg Tablets contain lactose; if you have been told by your doctor that you have an intolerance to some sugars, please contact your doctor before taking this medicinal product.

3. HOW TO TAKE CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS

Always take Cetirizine Hayfever and Allergy Relief 10 mg Tablets exactly as your doctor has told you. Check with your doctor if you are not sure.

Tablets need to be swallowed with a glass of liquid.
Children aged 6 to 12 years
The recommended dose is 5 mg twice daily as half a tablet twice a day.

Adults and children aged 12 years and over:
The recommended dose is 10 mg once daily as one tablet.

Patients with moderate to severe renal impairment:
Patients with moderate renal impairment are recommended to take 5 mg once daily as a half tablet.

If you suffer from severe kidney disease, please contact your doctor or pharmacist who may adjust the dose accordingly.

If you want to stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets, do not stop taking it suddenly. Your doctor will then decide what measures, if any, should be taken.

If you stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets than you should:

If you forget to take Cetirizine Hayfever and Allergy Relief 10 mg Tablets, then you should:

If you think you have taken an overdose of Cetirizine Hayfever and Allergy Relief 10 mg Tablets, please inform your doctor.

If you forget to take Cetirizine Hayfever and Allergy Relief 10 mg Tablets:

If you stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets:

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS

Like all medicines, Cetirizine Hayfever and Allergy Relief 10 mg Tablets can cause side effects, although not everybody gets them.

In very rare cases people have thought about committing suicide and if you feel this way then stop taking the tablets and see your doctor.

If you develop one of the very rare side effects described below, please inform your doctor straight away.

At the first signs of a severe allergic (hypersensitivity) reaction (symptoms include: rash, itching and fever, difficulty breathing, swelling of the neck, throat, tongue, face, eyelids or lips) stop taking the tablets and contact your doctor immediately.

This reaction may start soon after you first take the medicine or it might start later. Your doctor will then assess the severity and decide on any further measures that may be necessary.

The following side effects have also been reported.

Common side effects (may affect up to 1 in 10 patients):
- Fatigue
- Somnolence (sleepiness)
- Dizziness, headache
- Dry mouth, nausea (feeling sick), diarrhoea (children only)

- Paraesthesia (abnormal feelings of the skin), tingling in the hands and feet

Rare side effects (may affect up to 1 in 1,000 patients):
- Tachycardia (heart beating fast)
- Oedema (generalised swelling due to water retention)
- Liver function abnormal (your doctor will know what to do)
- Convulsions
- Weight increased
- Aggression, confusion, depression, hallucination (hearing or seeing things), insomnia (difficulty sleeping)
- Urticaria (swelling, redness and itching of the skin)

Very rare side effects (may affect up to 1 in 10,000 patients):
- Thrombocytopenia (low level of blood platelets), which increases risk of bleeding or bruising
- Accommodation disorder (impaired ability of the eye to focus), blurred vision, ocular hypopigmentation (eyes moving in an uncontrolled circular manner)
- Syncope (fainting), dyskinesia (involuntary movements), dystonia (abnormal prolonged muscular contractions), tremor, dysgeusia (altered taste)
- Tics (sudden abnormal repetitive muscle movement)
- Swelling of the skin particularly around the face, fixed drug eruption (may look like round or oval patches of redness and swelling of the skin)
- Abnormal elimination of urine (bed wetting, pain and/or difficulty passing water)

Not known frequency of side effects (frequency cannot be estimated from the available data):
- Increased appetite
- Amnesia (loss of memory)
- Memory impairment
- Vertigo (sensation of rotation or movement)
- Urinary incontinence (inability to completely empty the urinary bladder)
- Pruritus (intense itching) and/or urticaria upon discontinuation

Reporting of suspected adverse reactions
If you think you have any side-effects not mentioned in this leaflet, please inform your doctor or pharmacist.

This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard

By reporting side effects you can help provide more information on the safety of this medicine.
