WARNING

Sodium Valproate Injection can vary in the duration of effectiveness during treatment. If you are pregnant, breast-feeding or planning to become pregnant, you must be aware of the potential risks to your unborn child. Your doctor will advise you on the best course of action. You should not stop taking Sodium Valproate Injection unless your doctor tells you to as it may cause your condition to worsen. You should tell your doctor if you are planning to become pregnant, are breast-feeding or if you have become pregnant while taking Sodium Valproate Injection. You should also tell your doctor if you are planning to take any other medicines at the same time. It is important that you follow your doctor's instructions carefully. Sodium Valproate Injection is not recommended for use in children under 3 years of age. You should only use Sodium Valproate Injection if you have discussed the risks and benefits with your doctor. You should be aware that if you stop using Sodium Valproate Injection, you may experience withdrawal symptoms. Your doctor may suggest a gradual reduction in the dose when you stop taking it. You should not discontinue the use of Sodium Valproate Injection suddenly. You should avoid driving or operating machinery until you have been told it is safe to do so. You should not drink alcohol while taking Sodium Valproate Injection. You should also avoid taking other medicines that may affect the sodium valproate concentration in your blood. You should not take Sodium Valproate Injection if you are allergic to it or any of the ingredients listed in the section 4.4. You should not take Sodium Valproate Injection if you have had an allergic reaction to it in the past. You should not take Sodium Valproate Injection if you have had a reaction to another medicine in the sodium valproate class. You should not take Sodium Valproate Injection if you have a known metabolic disorder, i.e a urea cycle disorder. You should not take Sodium Valproate Injection if you have a disease of the immune system which affects skin, bones, organs and muscles. You should not take Sodium Valproate Injection if you have a known metabolic disorder, i.e a urea cycle disorder. You should not take Sodium Valproate Injection if you have a disease of the immune system which affects skin, bones, organs and muscles.
