**What Metronidazole Tablets are and what they are used for**

The name of this medicine is metronidazole. This belongs to a group of medicines called antibiotics. It works by killing bacteria and parasites that cause infections in your body. It can be used to:

- Treat infections of the blood, brain, lung, bones, genital tract, pelvic area, stomach and intestines
- Treat gum ulcers and other dental infections
- Treat infected leg ulcers and pressure sores
- Prevent infections after surgery

**Warnings and precautions**

Talk to your doctor or pharmacist before taking Metronidazole Tablets if:

- You have or have ever had a liver problem
- You are having kidney dialysis (see section 3: ‘People having kidney dialysis’)
- You have or have had a disease of the nervous system
- You are not sure if any of the above apply to you, talk to your doctor or pharmacist before taking your medicine. Do this even if they have applied in the past.

Cases of severe liver toxicity associated liver failure, including cases with a fatal outcome, in patients with Cockayne syndrome have been reported with metronidazole.

If you are affected by Cockayne syndrome, your doctor should also monitor your liver function frequently while you are being treated with metronidazole and afterwards.

**Serious skin reactions**

Serious skin reactions including Stevens-Johnson syndrome (SJS), toxic epidermal necrolysis (TEN), acute generalised exanthematous pustulosis (AGEP) have been reported with the use of metronidazole.

- SJS/TEN can appear initially as reddish target-like spots or circular patches often with central blisters on the trunk. Also, ulcers of the mouth, throat, nose, genitals and eyes (red and watery eyes) can occur. These serious skin rashes are often preceded by fever and/or flu-like symptoms. These rashes may progress to widespread peeling of the skin and life-threatening complications or be fatal.
- AGEP appears at the initiation of treatment as a red, scaly widespread rash with bumps under the skin and blisters accompanied by fever. The most common location: mainly localised on the skin folds, trunk, and upper extremities.

The highest risk for occurrence of serious skin reactions is within one week, typically, within 48 hours after start of treatment. If you develop a serious rash or another of these skin symptoms, stop taking metronidazole and contact your doctor or seek medical attention immediately.

Tell your doctor immediately and stop taking metronidazole if you develop:

- Stomach pain, anorexia, nausea, vomiting, fever, malaise, fatigue, jaundice, dark urine, putty or mastic coloured stools or itching
- Other medicines and Metronidazole Tablets

Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines. This includes medicines obtained without a prescription, including herbal medicines. This is because Metronidazole can affect the way some other medicines work. Also, some other medicines can affect the way Metronidazole works.

In particular, tell your doctor if you are taking any of the following medicines:

- Anti-coagulants (blood thinning agents), such as warfarin. The dosage of warfarin may need to be reduced when you are taking this drug.
- Lithium for mental illness. If taken at the same time as metronidazole, the kidneys may be affected.
- Medicines used to treat epilepsy, such as phenytoin, primidone, phenobarbital
- 5 fluorouracil for cancer
- Bosulif for leukaemia (cancer of the blood cells)
- Ciclosporin to prevent the rejection of organs after transplant
- Alcohol or alcoholism

If you are not sure, talk to your doctor or pharmacist before taking metronidazole.

**Pregnancy and breast-feeding**

Tell your doctor before using Metronidazole if:

- You are pregnant, might become pregnant or think you may be pregnant. Metronidazole should not be taken during pregnancy unless considered absolutely necessary.
- You are breast-feeding. It is better not to use Metronidazole if you are breast-feeding. This is because small amounts may pass into the mother’s milk.

Ask your doctor or pharmacist for advice before taking any medicine.

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking any medicine.

**Driving and using machines**

While taking Metronidazole you may feel sleepy, dizzy, confused, see or hear things that are not there (hallucinations), have fits (convulsions) or temporary eye-sight problems (such as blurred or double vision). If this happens, do not drive or use any machinery or tools.

**Tests**

Your doctor may wish to carry out some tests if you have been using this medicine for more than 10 days.

**3. HOW TO TAKE METRONIDAZOLE TABLETS**

**Taking your medicine**

Always take metronidazole exactly as your doctor or pharmacist has told you. Check with your doctor or pharmacist if you are not sure. It is important to finish a full course of treatment. The length of a course will depend on your illness and the type of infection being treated.

- **Children**
  - **Initial dose** is 90mg/kg/day in three divided doses
  - **Repeat dose** every 8 hours
  - **Top reductions** in the dose may be necessary. The recommended dose for adults and children is given below:

- **Top treatments**
  - **Top infections**
  - **Top infections**
  - **Top infections**

**3.3. HOW TO TAKE METRONIDAZOLE TABLETS**

**Always take metronidazole exactly as your doctor or pharmacist has told you. Check with your doctor or pharmacist if you are not sure. It is important to finish a full course of treatment. The length of a course will depend on your illness and the type of infection being treated.**

- **Children**
  - **Initial dose** is 90mg/kg/day in three divided doses
  - **Repeat dose** every 8 hours
  - **Top reductions** in the dose may be necessary. The recommended dose for adults and children is given below:

- **Top treatments**
  - **Top infections**
  - **Top infections**
  - **Top infections**
• Take 400 mg of metronidazole every 8 hours
• After the operation you may be given Metronidazole either through a drip into a vein or rectally as a suppository until you are able to take tablets again

Children
• Start giving your child Metronidazole Tablets 1-2 hours before their operation
• Your doctor will work out how much your child should take depending on their weight
• After the operation your child may be given Metronidazole either through a drip into a vein or rectally as a suppository until they are able to take tablets again

Other types of infections
For treatment of other infections caused by parasites and some bacteria your doctor will decide how much metronidazole you need to take and how often. This will depend on your illness and how bad it is.

The pharmacist’s label on the packaging will tell you how many tablets to take and how often to take them.

People having kidney dialysis
Kidney dialysis removes metronidazole from your blood. If you are having kidney dialysis you must take this medicine after your dialysis treatment.

People with liver problems
Your doctor may tell you to use a lower dose or to use the medicine less often.

If you take more Metronidazole Tablets than you should
If you take more metronidazole than you should, contact your doctor or nearest hospital emergency department immediately. Always take the box, this leaflet and any tablets that are left over with you, if you can. This is so the doctor knows what you have taken.

If you forget to take Metronidazole Tablets
If you miss a dose, take it as soon as you remember and carry on as before. If it is almost time for your next dose, skip the forgotten dose and continue as usual. Do not take a double dose to make up for a forgotten dose.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

8. POSSIBLE SIDE EFFECTS
Like all medicines, this medicine can cause side effects, although not everybody gets them.

Stop taking Metronidazole and see a doctor or go to a hospital straight away if:
• You get swelling of the hands, feet, ankles, face, lips or throat which may cause difficulty in swallowing or breathing. You could also notice an itchy, lumpy rash (hives) or nettle rash (urticaria) which is itchy. This may mean you are having an allergic reaction to Metronidazole.
• A sudden but very rare side effect is a brain disease (encephalopathy). Symptoms vary but you might get a fever, stiff neck, headache, see or hear things that aren't there. You might also have problems swallowing or breathing. You could also notice an itchy, lumpy rash (hives) or nettle rash (urticaria) which is itchy. This may mean you are having an allergic reaction to Metronidazole.
• You develop skin rashes including Stevens-Johnson syndrome or toxic epidermal necrolysis. These can appear as reddish target-like spots or circular patches often with central blisters on the trunk, skin peeling, ulcers of the mouth, throat, nose, genitals and eyes and can be preceded by fever and flu-like symptoms. Stop using Metronidazole if you develop these symptoms and contact your doctor or seek medical attention immediately. See also section 2.
• You develop a red, scaly widespread rash with bumps under the skin and blisters accompanied by fever at the initiation of treatment (acute generalised exanthematous pustulosis). Stop using Metronidazole if you develop these symptoms and contact your doctor or seek medical attention immediately. See also section 2.
• You get swelling of the hands, feet, ankles, face, lips or throat which may cause difficulty in swallowing or breathing. You could also notice an itchy, lumpy rash (hives) or nettle rash (urticaria) which is itchy. This may mean you are having an allergic reaction to Metronidazole.

Tell your doctor or pharmacist if you notice any of the following side effects:

Very rare (affects less than 1 in 10,000 people)
• Fits (convulsions)
• Mental problems such as feeling confused and seeing or hearing things that are not there (hallucinations)
• Problems with your eyesight such as blurred or double vision
• Skin rash and flushing
• Headache
• Darkening of the urine
• Feeling sleepy or dizzy
• Pains in the muscles or joints
• Liver problems including life threatening liver failure (hepatocellular liver injury)

Not known (frequency cannot be estimated from the available data)
• Numbness, tingling, pain, or a feeling of weakness, in the arms or legs
• Unpleasant taste in the mouth
• Furred tongue
• Feeling sick (nausea), being sick (vomiting), upset stomach, or diarrhoea
• Loss of appetite
• Fever
• Feeling depressed
• Pain in your eyes (optic neuritis)
• A group of symptoms together including: fever, nausea, vomiting, headache, stiff neck and extreme sensitivity to bright light. This may be caused by an inflammation of the membranes that cover the brain and spinal cord (meningitis)
• Hearing impairment/ hearing loss
• Ringing in the ears (tinnitus)
• You get a rash or skin discolouration with or without raised areas which often reoccurs at the same location each time the drug is taken

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store.

By reporting side effects you can help provide more information on the safety of this medicine.

5. HOW TO STORE METRONIDAZOLE TABLETS

- Keep this medicine out of the sight and reach of children.
- Store below 25°C in original packing (protect from light)
- Do not use this medicine after the expiry date shown on the pack. The expiry date refers to the last day of that month
- Ask your pharmacist how to dispose of medicines no longer required. Do not dispose of medicines by flushing down a toilet or sink or by throwing out with your normal household rubbish. This will help protect the environment.

6. CONTENTS OF THE PACK AND OTHER INFORMATION

What Metronidazole Tablets contain
Each tablet contains 200mg or 400mg of metronidazole as the active substance.

The other ingredients are povidone, magnesium stearate, colloidal anhydrous silica and maize starch.

What Metronidazole Tablets look like and contents of the pack
The tablets are off-white coloured, round, biconvex and uncoated, engraved with either ‘MZ 200’ (200mg) or ‘MZ 400’ (400mg) and a break line on one side whilst plain on the other.

Metronidazole Tablets 200mg are available in containers of 7, 14, 15, 21, 28, 42, 56, 70, 84, 100, 250, 500 and 1000 as well as in bottles containing 30, 50, 60, 80, 100, 112, 120, 140, 168, 180, 500 and 1000 tablets.

They are also available in blister packs of 7, 14, 15, 21, 28, 42, 56, 70 and 84 tablets (not all pack sizes may be marketed).
