

Metaraminol 0.5 mg/ml Solution for Injection/Infusion Metaraminol

Read all of this leaflet carefully before you start using this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor, nurse or pharmacist.
- If you get any side effects, talk to your doctor, nurse or pharmacist.
This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

1. What Metaraminol 0.5 mg/ml Solution for Injection/Infusion is and what it is used for
2. What you need to know before you are given Metaraminol 0.5 mg/ml Solution for Injection/Infusion
3. How Metaraminol 0.5 mg/ml Solution for Injection/Infusion will be given
4. Possible side effects
5. How to store Metaraminol 0.5 mg/ml Solution for Injection/Infusion
6. Contents of the pack and other information

1. What Metaraminol 0.5 mg/ml Solution for Injection/Infusion is and what it is used for

The name of the medicine is Metaraminol 0.5 mg/ml Solution for Injection/Infusion. The name is shortened to Metaraminol Injection in the rest of the leaflet. It contains the active ingredient metaraminol (as metaraminol tartrate).

It is used to increase your blood pressure which can drop during spinal anaesthesia or can drop as a reaction to medications or surgical complications.

2. What you need to know before you are given Metaraminol 0.5 mg/ml Solution for Injection/Infusion

You will be given this medicine in hospital by a doctor or nurse.

You should not be given this medicine:

- if you are allergic to metaraminol tartrate or any of the other ingredients of this medicine (listed in section 6) including sulfites that may cause an allergic type reaction or an asthmatic episode in certain susceptible people
- if you are being given cyclopropane or halothane anaesthesia unless your doctor sees a clinical need to do so
- if you have low blood pressure that has been caused by low blood volume

Warnings and precautions

Talk to your doctor or nurse before being given Metaraminol Injection.

Your doctor will administer the medicine with care to avoid rapid changes in your blood pressure which can cause fluid build-up in the lungs, irregular heartbeat, or heart failure. If any of these occur, your doctor will take appropriate action.

If it is necessary to administer Metaraminol Injection for a prolonged time, this can cause high blood pressure which continues when the medicine is stopped. Your doctor will treat this if necessary.

This medicine may result in a diuretic effect, which increases urination, and may affect electrolyte levels. If this happens you will be given fluid replacement.

Your doctor needs to know before you are given Metaraminol Injection if you suffer from or have ever suffered from any of the following conditions:

- | | |
|---------------------------|-------------------|
| • Liver disease or injury | • Thyroid disease |
| • Heart disease | • Diabetes |
| • High blood pressure | • Malaria |

Your doctor or nurse will choose the most suitable vein for the injection to be given. If there is any leakage of medicine around the injection site this can cause damage. The injection site will be checked frequently. If leakage occurs you will be given treatment to avoid tissue damage occurring.

Children and adolescents

Do not use this medicine in children below the age of 12 years.

Other medicines and Metaraminol

Tell your doctor if you are taking or have recently taken any other medicines, including medicines obtained without a prescription. It is especially important if you are taking:

- Anaesthetics such as cyclopropane or halothane
- Digitalis medicines (such as digoxin) which may cause an irregular heartbeat
- A monoamine oxidase inhibitor (used to treat severe depression), such as phenelzine or isocarboxazid
- Oxytocin, a drug used to prevent or control bleeding after delivery of your baby

These medicines may be affected by metaraminol or may affect how well it works. You may need different amounts of your medicines, or you may need to take different medicines.

Your doctor has more information on medicines to be careful with or avoid while being given this medicine.

Pregnancy and breast-feeding

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before being given this medicine.

If you are pregnant, it is unlikely that you will be given this medicine, unless the doctor sees the clinical need to do so in an emergency situation.

It is not known whether this medicine is passed through to the baby in the mother's breast milk. Caution should be exercised if this medicine is given to a breast-feeding mother.

Driving and using machines

Metaraminol Injection is not expected to affect your ability to drive or use machines.

Metaraminol Injection contains sodium chloride and sodium metabisulfite

This medicine contains less than 1 mmol sodium (23 mg) per ml that is to say essentially 'sodium-free'.

This medicine also contains sodium metabisulfite (E223), a preservative which may rarely cause severe allergic (hypersensitivity) reactions and difficulty breathing (bronchospasm).

3. How Metaraminol 0.5 mg/ml Solution for Injection/Infusion will be given

Metaraminol Injection will be given to you in a hospital as an injection into a vein.

Your doctor will decide on the correct dosage for you and how and when the medicine will be given.

Direct Intravenous injection (in grave emergencies)

The initial dose is usually 0.5 – 5 mg metaraminol.

Intravenous infusion

The initial dose may be followed by an infusion of 15 – 100 mg metaraminol, titrated to clinical effect.

Use in children

This medicine should not be given to children.

If you are given too much Metaraminol Injection

In the event you are given too much Metaraminol Injection, you may experience high blood pressure accompanied by a headache, a tight feeling in the chest, nausea, vomiting, euphoria, sweating, fluid in the lungs, increased or decreased heart rate, irregular heart beat, heart attack, heart failure, or convulsions (fits).

Tell your doctor immediately if you feel unwell. Treatment with this medicine may subsequently be stopped, and if needed, an antidote will be administered by medical staff.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them.

The frequency of possible side effects are listed below.

Tell your doctor immediately if you experience:

Very Common (affects more than 1 patient in 10):

- Headache
- High blood pressure

Rare (affects 1 to 10 patients in 10,000):

- Abscess or peeling skin at the site of injection, or an area where the tissue around the injection site dies

Not known (frequency cannot be estimated from available data):

- Fatal changes in heart rhythm in patients suffering from liver cirrhosis
- Changes in heart beat including slower or faster heart rates or palpitations
- Reduced blood supply to the arms and legs (including hands and feet)
- Feeling sick

Reporting of side effects

If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly in the UK via the Yellow Card Scheme (Website: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store). By reporting side effects, you can help provide more information on the safety of this medicine.

5. How to store Metaraminol 0.5 mg/ml Solution for Injection/Infusion

Keep this medicine out of the sight and reach of children.

Metaraminol Injection should only be given to you in a hospital. The hospital is responsible for storing it correctly.

Your doctor or nurse will check the expiry date has not passed before giving you this medicine.

6. Contents of the pack and other information
