Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

Keep this leaflet. You may need it again.

If you have any further questions, ask your doctor or pharmacist. This medicine has been prescribed for you by your doctor. Possible side effects

May harm them, even then the signs of illness may not be obvious. Speak to your doctor or pharmacist. This includes any other tablets not listed in this section 6.

1. What Ibuprofen tablets are and what they are used for

The name of your medicine is Ibuprofen tablets. The active ingredient in your medicine is ibuprofen. Ibuprofen belongs to a group of medicines called Non-Steroidal Anti-inflammatory Drugs.

Ibuprofen works by reducing inflammation. Ibuprofen may hide signs of infections such as chickenpox. If you take this medicine while you have an infection and your symptoms do not improve, or become worse, you should see your doctor again.

2. Why to use before you know you must take any other medicines

- medicines that are anti-coagulants (i.e. prevent bleeding) such as aspirin/acetylsalicylic acid, warfarin, thin blood/prevent clotting e.g. heparin or low molecular weight heparin (LMWH), enoxaparin, dalteparin
- cholestyramine (a drug used to lower blood cholesterol, mainly in association with Ibuprofen tablets)

3. What to do with any possible side effects not listed in this section 6.

- medicines used to relax muscles

4. How to take Ibuprofen tablets

- medicines used to treat heart failure

5. How to store Ibuprofen tablets

- medicines used to treat cancer, such as methotrexate and mifamurtide

6. Contents of the pack and other information

- medicines used to treat various illnesses (e.g. cold and flu symptoms, hayfever, sinusitis)

- medicines used to treat heart problems such as angina, raised blood pressure (ACE-inhibitors such as captopril, beta-blockers such as atenolol medicines, angiotensin-II receptor antagonists such as losartan)

- medicines used to treat tuberculosis

- medicines used to treat infections (infections) which in some cases may be serious

3. What you should know about your medicine

4. Possible side effects

5. How to take and stop taking Ibuprofen tablets

6. Contents of the pack and other information

Ibuprofen works by reducing inflammation. Ibuprofen may hide signs of infections such as chickenpox. If you take this medicine while you have an infection and your symptoms do not improve, or become worse, you should see your doctor again.
Taking this medicine with or after food or milk may only partially reduce stomach upset. Taking this medicine with food will reduce the risk of side effects such as indigestion (see section 4).

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, Ibuprofen tablets can cause side effects, although not everybody gets them. If any of the side effects become serious, or if you are concerned about any side effect, please talk to your doctor or pharmacist. Do not be afraid to consult your doctor, pharmacist or nurse.

Some symptoms might disappear as the treatment is going on. If you notice any of these symptoms, you should contact your doctor or pharmacist immediately.

Ibuprofen has also been shown to interfere with the protective membrane surrounding the kidneys, kidney failure

If you experience any side effects not listed in this leaflet, and/or any other effects that you think might be caused by this medicine, please consult your doctor or pharmacist.
