Now read this whole leaflet carefully before you use this medicine. Keep the leaflet: you might need it again.

What the medicine is and what it is used for

Benylin Children's Chesty Coughs is a medicine which is used to help relieve chesty coughs in children. It contains guaifenesin (an expectorant) to help loosen mucus (phlegm) from the lungs and make it easier to cough up. The medicine is for use in children aged 6-12 years.

2 What you need to know before giving this medicine to your child

This medicine is suitable for most children but a few children should not use it. If you are in any doubt, talk to your doctor or pharmacist.

⊗ Do not use this medicine...

- If your child has ever had a **bad reaction** to this product or any of the ingredients. See section 6 for full list of ingredients.
- If your child is taking **any other cough and cold medicine.**
- If your child is aged under 6 years.

If any of these apply, **get advice from a doctor or pharmacist without using Benylin Children's Chesty Coughs.**

⚠ Talk to your doctor or pharmacist...

- If your child suffers from **liver** or **kidney problems.**
- If your child has a **persistent cough** such as occurs with asthma, has **asthma**, is suffering from an **asthma attack** or a **cough that produces a lot of mucus (phlegm).**

If any of these apply now or in the past, **talk to a doctor or pharmacist.**

⚠ If you are pregnant or breast-feeding

The following advice is included in case an older child or adult is taking the medicine.

- If you are pregnant or breast-feeding, only use this medicine on the advice of your doctor.

⚠ Some of the ingredients can cause problems

- This medicine contains sorbitol liquid. This should be taken into account in patients with an intolerance to some sugars.
- This medicine may have a laxative effect and has a calorific value of 13.2 kcal per 10 ml dose.

- This medicine contains 14.94 mg sodium with 10 ml dose. To be taken into consideration by patients on a controlled sodium diet.

3 How to use this medicine

Check the table below to see how much medicine to take.

- For oral use only.
- Do not give more than the stated dose shown below.

ⓘ Children under 6 years old

This medicine is not recommended for children under 6 years old.

ⓘ Children 6 - 12 years

Age	Dose
Children 6 - 12 years	Two 5 ml spoonfuls four times a day.

- Do not give more than 4 doses in 24 hours.
- If symptoms persist or worsen, talk to your doctor or pharmacist.
- Do not give to a child under 12 years of age for more than 5 days without consulting your doctor.
- If your child's cough comes back or is accompanied by a high temperature, rash or a headache that does not go away, stop using this medicine and talk to your doctor or pharmacist.

⚠ If anyone has too much

If anyone has taken too much, contact a doctor or your nearest Accident and Emergency department (Casualty), taking this leaflet and pack with you.

⚠ If you forget to give the medicine

You should only give this medicine as required following the dosage instructions above carefully. If you forget to give a dose, give the next dose when needed. **Do not** give a double dose.

Manufacturer: Famar Orleans, 5 avenue de Concyr, 45071 Orleans, Cedex 2, France.

This leaflet was revised April 2015.

Benylin is a registered trade mark.

7 Information about treating cough and cold in children

It's normal for children to get 8 or more colds in a year. Gradually they build up immunity and get fewer colds. Most colds get better within a few days and you may not need to do more than keep your child comfortable until they get over it. Because colds are caused by viruses, not bacteria, antibiotics don't help. Here are simple steps to help your child who has a cough or cold.

- **If they are hot/feverish:** Increase the amount of fluid your child normally drinks. Lower their temperature with a paracetamol or ibuprofen medicine which has doses for children. (Paracetamol is not for children under 2 months. Ibuprofen is not for children under 3 months.)
- **For coughs:** Although it is distressing to hear your child cough, in fact coughing serves a purpose. It helps clear phlegm on the chest and mucus from the nose. Give the child plenty of warm clear fluids to drink.
- **To help with breathing:** Plain saline nose drops, available from your pharmacy, can help babies with blocked noses who are having trouble feeding.
