Read all of this leaflet carefully before you start taking this vaccine because it contains important information for you.

1. What Vivotif is and what it is used for

Vivotif is an oral vaccine that stimulates an immune response against a type of bacteria called Salmonella Typhi that causes typhoid fever. It is used for protection from typhoid fever in adults and children 5 years and older.

2. What you need to know before you take Vivotif

Do not take Vivotif:
- If you are allergic (hypersensitive) to Salmonella Typhi Ty21a or any of the other ingredients of this vaccine (listed in section 6).
- If you experienced allergic reactions when you previously took Vivotif.
- If you have a poor immune system for any reason, for example, if you have had poor immunity to infections since birth. You may also have poor immunity due to certain infections or treatments that depress the immune system – such as high dose corticosteroids, cancer drugs or radiotherapy.
- If you have a high fever (above 38.5°C) or an illness affecting your gut (such as diarrhoea) at the moment – do not take Vivotif until you have recovered.

Warnings and precautions

Not everyone taking a full course of Vivotif will be fully protected against typhoid fever. It is important to continue to adhere to hygiene advice and exercise caution regarding food and water consumed in typhoid-affected areas.

Children

Do not give this vaccine to children younger than 5 years old since the capsule is not suitable for this age group.

Other medicines and Vivotif

Tell your doctor, pharmacist or nurse if you are taking, have recently taken or might take any other medicines or vaccines. This includes medicines obtained without a prescription, including herbal medicines. This is because Vivotif can affect the way some other medicines and vaccines work. In particular tell your doctor, pharmacist or nurse if you are taking:
- antibiotics – Vivotif may not work if it is taken while you are also taking antibiotics. Take Vivotif no earlier than 3 days after the last dose of an antibiotic.
- medicines to prevent malaria – do not start these until 3 days after the last dose of Vivotif unless otherwise directed by your doctor, pharmacist or nurse.
- if any of the above apply to you, talk to your doctor, pharmacist or nurse before taking Vivotif.

3. How to take Vivotif

Always take this vaccine exactly as your doctor, pharmacist or nurse has told you. Check with your doctor, pharmacist or nurse if you are not sure.

The blister pack containing the vaccine capsules should be inspected to ensure that the foil seal and capsules are intact.

How much and when to take

The recommended dose is three capsules. One capsule is taken every other day.
- Take the first capsule on a chosen day. This is Day 1.
- Take the second capsule on Day 3.
- Take the third capsule on Day 5.
How to take your capsules
• Take the capsules on an empty stomach and at least one hour before the next meal.
• Do not crush or chew the capsules.
• Swallow the capsules with cold or lukewarm water (temperature not more than 37 °C).
• Swallow the capsules as quickly as possible after placing in your mouth.
Protection against typhoid fever starts at about seven to ten days after taking the course of three capsules. Your doctor, pharmacist or nurse will advise you how soon before travelling to have your course of Vivotif. After three years, you may need to receive Vivotif again if you continue to visit areas where typhoid fever occurs. In this case, consult with your doctor, pharmacist or nurse.

If you take more Vivotif than you should
If you take all three doses at once by accident, tell your doctor pharmacist or nurse. It is unlikely to make you ill but you may not be well protected against typhoid fever.
If you forget to take Vivotif
If you forget a dose, take it as soon as you remember. Then take the next dose about 48 hours later.
If you have any further questions on the use of this product, ask your doctor, pharmacist or nurse.

4. Possible side effects

Like all vaccines, this vaccine can cause side effects, although not everybody gets them.
Contact a doctor immediately if you experience the following serious side effects:
• serious allergic reactions causing swelling of the face or throat and breathlessness and/or a drop in blood pressure and fainting.

Other side effects:
• Common side effects (may affect up to 1 in 10 people)
• stomach pains,
• feeling or being sick,
• diarrhoea,
• fever,
• headache,
• skin redness.

Other side effects (frequency cannot be estimated from the available data):
• skin irritation, rashes, red or lumpy raised rashes, and itching,
• weakness,
• generally feeling unwell,
• shivering,
• feeling tired,
• pins and needles,
• feeling dizzy,
• pain in your joints or muscles.
• back pain
• decreased appetite, abdominal gas, bloating
• flu-like illness

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme. Website: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store.
By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Vivotif

Keep this vaccine out of the sight and reach of children.
Do not use Vivotif after the expiry date which is stated on the label.
The expiry date refers to the last day of that month.
Store in a refrigerator (2 °C – 8 °C).
Keep the blister pack in the outer carton in order to protect from light.
Do not use this vaccine if you notice that the blister pack or the capsules are not intact.
Do not throw away any medicines via wastewater. Ask your pharmacist or nurse.
Do not use Vivotif if you notice that the blister pack or the capsules are not intact.
If you take any side effects, talk to your doctor, pharmacist or nurse.
If you notice that the blister pack or the capsules are not intact.
If you take any side effects, talk to your doctor, pharmacist or nurse.

6. Contents of the pack and other information

What Vivotif contains
• Each capsule contains at least 2x10^9 viable cells of Salmonella Typhi Ty21a.
• The other ingredients are lactose anhydrous, sucrose, casein hydrolysate, ascorbic acid (E300), magnesium stearate (E470), non-viable cells of Salmonella Typhi Ty21a.
Capsule shell: gelatin, titanium dioxide (E171), erythrosine (E127), iron oxide yellow (E172) and iron oxide red (E172).
Capsule coating: hydroxypropylmethylcellulose phthalate, ethylene glycol and diethyl phthalate.

What Vivotif looks like and contents of the pack
The pack contains a blister pack with three enteric-coated capsules of Vivotif. The capsules are bicolorised white and salmon.
