Important things you should know about Vencarm XL. Please read all of this leaflet before you start using Vencarm XL. If you have any questions or side effects, please ask your doctor or pharmacist. You must tell your doctor if any of the symptoms listed occur in your baby or any of the symptoms listed occur in your child.

Warnings and precautions
- If you are breastfeeding, consult your doctor or pharmacist before taking Vencarm XL. Vencarm XL passes into breast milk. There is a risk of an adverse effect to your baby. Contact your doctor and/or midwife who will be able to discuss the potential benefits and risks to your baby.
- There is a risk that Vencarm XL may cause an increase in the release of medicine, potentially causing lactic acidosis and severe rhabdomyolysis. You should inform your doctor if any of the symptoms listed occur in your child. You should contact your doctor and/or pharmacist immediately if you have any of the symptoms listed.
- This medicine has been prescribed for you only. Do not give to others, even if they have the same condition. It contains ingredients that may cause an adverse effect to others.
- Take Vencarm XL on an empty stomach at least 2 hours before or 2 hours after meals. The absorption of Vencarm XL may be decreased by food. Do not chew or break the capsule. If you take too many capsules, it is important to seek medical advice immediately.

Possible side effects

Vencarm XL is used to treat depression, severe and
certain other mental health disorders, and to prevent and treat high blood pressure. It can also be used for certain other conditions. This medicine is a treatment for adults with depression. It is also used to treat depression or anxiety disorders in adults, and is thought to be effective by increasing the levels of serotonin and noradrenaline in the brain. Vencarm XL should normally not be used for children and adolescents.

Other medicines and Vencarm XL

Children and adolescents

- If you are a young adult. Information from clinical trials has shown that Vencarm XL may cause lactic acidosis and severe rhabdomyolysis. You should inform your doctor if any of the symptoms listed occur in your child. You should contact your doctor and/or pharmacist immediately if you have any of the symptoms listed.
- This is important to help you get better. If it is not treated, your symptoms may get worse. If you have symptoms of depression such as an increased interest in things, excitement, and insomnia, please go back to your doctor. You may need to increase your dose or change your medicine. Do not stop taking Vencarm XL without talking to your doctor.
