1. What Glycopyrronium and Neostigmine Injection is and what it is used for

Glycopyrronium-Neostigmine Injection contains two active ingredients:
- Glycopyrronium Bromide belongs to a group of medicines called anticholinergic drugs. It is used to counteract some unwanted effects that may occur with Neostigmine.
- Neostigmine belongs to a group of medicines called cholinesterase inhibitors. It can be used to reverse the effects of a type of muscle-relaxing drug used during operations called non-depolarising muscle relaxants.

Glycopyrronium and Neostigmine Injection is used to reverse the muscle relaxation produced by non-depolarising muscle relaxants.

2. What you need to know before you are given Glycopyrronium and Neostigmine Injection

Before you are given this medicine because it contains important information for you.
- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor, pharmacist or nurse.
- If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet:
- What Glycopyrronium and Neostigmine Injection is and what it is used for.
- Warning and precautions.
- What you need to know before you are given Glycopyrronium and Neostigmine Injection.
- How Glycopyrronium and Neostigmine Injection is given.
- Possible side effects.
- How to store Glycopyrronium and Neostigmine Injection.
- Contents of the pack and other information.
