Glyceryl Trinitrate tablets are used in the treatment of chest pain associated with angina. They work rapidly by making it easier to pump blood. Nitrates temporarily relax most smooth muscle, including that found in the walls of blood vessels in the heart. This reduces strain on the heart by making it easier to pump blood. Glyceryl Trinitrate tablets are used in the treatment of chest pain associated with angina. They work rapidly by dissolving under the tongue and being absorbed quickly into the bloodstream.
