**How to store Diazemuls**

- How to store Diazemuls

  Diazemuls is a white, milky fluid. Diazemuls should be stored unopened in the refrigerated unit at 2°C to 8°C. After opening the bottle, it should be stored in the refrigerator at 2°C to 8°C. Do not freeze. Discontinue use if the bottle or vial shows signs of contamination.

- No changes are permitted by any 3rd party other than added notes and mark ups for required changes.

**Diazemuls**

- Diazemuls is a white, milky fluid. Diazemuls contains egg phospholipid and soybean oil. If you are allergic to eggs or soy, tell your doctor or pharmacist.

- Diazemuls can cause side effects when injected, especially if the injection is too rapid. If you think you have had too much Diazemuls, contact your nearest hospital casualty department.

- Always check that the medicine you are receiving is the one prescribed by your doctor, and that the expiry date is not passed.

- The recommended dose is 0.1-0.2 mg per kg of body weight by intravenous injection, should be adjusted to the patient's requirement.

- Diazemuls may cause side effects when given by intravenous injection. The normal adult dose is 10-20 mg, but the dose may be adjusted as required.

- Diazemuls should not be given to a driver or a person as a sole intravenous injection (i.e. on an emergency basis) if the person is likely to be required to drive safely.
