What is loprazolam and what is it used for?
Loprazolam is a medicine containing the active substance loprazolam mesylate. It is used to treat sleep problems such as:
- Difficulty falling asleep
- Waking up during the night
- Feels you need to get up early in the morning
- Feeling drowsy, dizzy and confused during the day.
Loprazolam is used to help you fall asleep and stay asleep.

How do you take loprazolam?
Loprazolam is available as tablets.

- The usual dose is one tablet (1mg) just before bedtime. This dose may be increased by your doctor to a maximum of 2 tablets (2mg) per night. If you have not been taking this medicine before, you may start with one tablet just before bedtime.
- The maximum dose is 2 tablets (2mg) per night.
- Loprazolam is not meant to be used every day for long periods of time. Ask your doctor for advice if you are using this medicine for longer than 3 months.

How much loprazolam is there in each tablet?
Each tablet contains 1mg of loprazolam mesylate as the active substance.

What should you do if you take too much loprazolam?
If you take more loprazolam than you should, especially if you take it on purpose, you may experience:
- Drowsiness and decreased level of consciousness which can lead to fall hazards.
- Slow or shallow breathing.
- Seizures.
- Changes in your ability to see, hear or think.
- Feeling dizzy, sleepy or confused.
- Feeling sick (nausea), stomach problems.
- Dizziness.
- Skin rash.

Do not give this medicine to children.

What should you do if you forget to take loprazolam?
If you forget to take your tablet at bedtime, then you should:
- Take it as soon as you remember.
- If you forget to take your tablet after bedtime, then you should:
- Take it as soon as you remember.
- You do not need to take an extra tablet the next night.

What should you do if you don’t feel you will ever be able to stop taking loprazolam?
If you have been taking loprazolam for a long time, your sleep may become even worse if you stop using it. You should also talk to your doctor before trying to stop using loprazolam. It may need to be reduced over a longer period of time. The doctor may recommend that you should take a lower dose of loprazolam for a few weeks before you stop using it.

What should you do if you are taking another medicine at the same time as loprazolam?
Loprazolam can affect the way other medicines work, and some other medicines can affect the way loprazolam works. This may mean you are having an allergic reaction. This may mean you are having an allergic reaction. This may mean you are having an allergic reaction. Some examples of medicines that can affect the way loprazolam works are:
