Aqueous Cream is used as a cleansing agent for your skin, and as an emollient to soothe and soften it. Before you use Aqueous Cream: Do not use if you are allergic to any of the ingredients. This product has been found to have major sunscreen activities and should not be used before any form of light treatment (phototherapy) or phototesting. The product contains cetostearyl alcohol and sodium laurel sulfite which may cause local skin reactions (e.g. stinging and contact dermatitis) particularly in children with eczema. Pregnancy: The safety of Aqueous Cream during pregnancy and breast-feeding has not been established. Discuss with your doctor. How to use Aqueous Cream: Apply to the affected areas of skin as required. The quantity required will depend on the skin condition. The product should be applied in the direction of hair growth. Caution: This preparation may make skin and surfaces slippery particularly when having a bath or shower. If you have any further questions on the use of this product, ask your pharmacist or doctor. If you accidentally swallow Aqueous Cream: contact your doctor or pharmacist. Side effects: Like all medicines, this medicine can cause side effects although not everybody gets them. Side effects include occasional allergic reaction, acne, inflammation or infection of hair follicles (folliculitis), stinging, burning, itching, redness, contact dermatitis and rash. Reporting of side effects: If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at www.mhra.gov.uk/yellowcard. By reporting side effects you can help provide more information on the safety of this medicine. Storing Aqueous Cream: Keep out of the sight and reach of children. Store below 25˚C. Do not freeze. Use within 3 months of the initial opening. Your pharmacist will dispose of any unused cream.
