What is in this leaflet:
- What you need to know before you take Repaglinide tablets
- How to take Repaglinide tablets
- Possible side effects
- How to store Repaglinide tablets
- Contents of the pack and other information

Repaglinide tablets are an oral antidiabetic medicine containing repaglinide which helps your pancreas produce more insulin and thereby lower your blood sugar (glucose). Type 2 diabetes is a disease in which your pancreas does not make enough insulin to control the sugar in your blood or your body does not respond normally to the insulin it produces.

Repaglinide is used to control type 2 diabetes in adults as an add-on to diet and exercise: treatment is usually started if diet, exercise and weight reduction alone have not been able to control (or lower) your blood sugar. Repaglinide can also be given with metformin, another medicine for diabetes.

Repaglinide has been shown to lower the blood sugar, which helps to prevent complications from your diabetes.

Children and adolescents
Do not take this medicine if you are under 18 years of age.

If you get a hypo (low blood sugar)
You may get a hypo (short for hypoglycaemia) if your blood sugar gets too low. This may happen:
- if you take too much Repaglinide.
- if you exercise more than usual.
- if you take other medicines or suffer from liver or kidney problems (see other sections of 2. What you need to know before you take).

The warning signs of a hypo may come on suddenly and can include: cold sweat, cool pale skin; headache; rapid heart beat; feeling sick; feeling very hungry; temporary changes in vision; drowsiness; unusual tiredness and weakness; nervousness; feeling very angry, anxious, feeling confused; difficulty in concentrating.

If your blood sugar is low or you feel a hypo coming on: eat glucose tablets or a high sugar snack or drink, then rest.

When symptoms of hypoglycaemia have disappeared or when blood sugar levels are stabilised continue Repaglinide treatment as you have been doing for diabetes and that if you pass out (become unconscious) due to a hypo, they must turn you on your side and get medical help straight away. They must not give you any food or drink. It could choke you.

If severe hypoglycaemia is not treated, it can cause brain damage (temporary or permanent) and even death.

If you have a hypo that makes you pass out, or a lot of hypoglycaemia, talk to your doctor. The amount of Repaglinide, food or exercise may need to be adjusted.

If your blood sugar gets too high
Your blood sugar may get too high (hyperglycaemia). This may happen:
- if you take too little Repaglinide.
- if you have an infection or a fever.
- if you eat more than usual.
- if you exercise less than usual.

The warning signs of too high blood sugar appear gradually. They include: increased urination; feeling thirsty; dry skin and dry mouth. Talk to your doctor. The amount of Repaglinide, food or exercise may need to be adjusted.

Other medicines and Repaglinide
Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines. You can take Repaglinide with metformin, another medicine for diabetes, if your doctor prescribes it. If you take gemfibrozil (used to lower increased fat levels in the blood) you should not take Repaglinide.

Your body’s response to Repaglinide may change if you take other medicines, especially these:
- Monoamine oxidase inhibitors (MAOI) (used to treat depression)
- Beta blockers (used to treat high blood pressure or heart conditions)
- ACE inhibitors (used to treat heart conditions)
- Salicylates (e.g. aspirin) (nonsteroidal anti-inflammatory drugs (NSAID)
- Ondansetron (used to treat cancer)
- Octreotide (used to treat cancer)
- Nonsteroidal anti-inflammatory drugs (NSAID) (a type of painkiller)
- Steroids (anabolic steroids and corticosteroids – used for anaemia or to treat inflammation)
- Oral contraceptives (birth control pills)
- Thiazides (diuretics or "water pills")
- Phenytoin, carbamazepine, phenobarbital (used to treat epilepsy)
- Itraconazole, ketoconazole (antifungal medicines)
- Clarithromycin, trimethoprim, rifampicin (antibiotic medicines)
- Gemfibrozil (used to treat high blood fats)
- Ciclosporin (used to suppress the immune system)
- Phenylbutazone, pravastatin (used to treat gout)

If you take too many tablets, turn medical help straight away. They may turn you on your side. They must not give you any food or drink. It could choke you.

Repaglinide tablets are an oral antidiabetic medicine containing repaglinide which helps your pancreas produce more insulin and thereby lower your blood sugar (glucose).

Type 2 diabetes is a disease in which your pancreas does not make enough insulin to control the sugar in your blood or your body does not respond normally to the insulin it produces.

Repaglinide is used to control type 2 diabetes in adults as an add-on to diet and exercise: treatment is usually started if diet, exercise and weight reduction alone have not been able to control (or lower) your blood sugar. Repaglinide can also be given with metformin, another medicine for diabetes.

Repaglinide has been shown to lower the blood sugar, which helps to prevent complications from your diabetes.
Repaglinide with alcohol
Always check with your doctor or pharmacist whether you can have a drink if you are taking Repaglinide.

Pregnancy and breast-feeding
If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine.

You should not take Repaglinide if you are pregnant or you are planning to become pregnant.

You should not take Repaglinide if you are breast-feeding.

Driving and using machines
Your ability to drive or use a machine may be affected if your blood sugar is low or high. Bear in mind that you could endanger yourself or others. Please ask your doctor whether you can drive a car if you:

- have frequent hypoglycaemia
- have few or no warning signs of hypoglycaemia.

How to take
Always take this medicine exactly as your doctor has told you. Check with your doctor if you are not sure. Your doctor will work out your dose.

- The normal starting dose is 0.5mg before each main meal. Swallow the tablets with a glass of water immediately before or up to 30 minutes before each main meal. The dose may be adjusted by your doctor up to 4mg to be taken immediately before or up to 30 minutes before each main meal. The maximum recommended daily dose is 16mg.

Do not take more Repaglinide than your doctor has recommended.

If you take more Repaglinide than you should
If you take too many tablets your blood sugar may become too low, leading to a hypo. Please see ‘If you get a hypo’ on what a hypo is and how to treat it.

If you forget to take Repaglinide
If you miss a dose, take the next dose as usual. Do not take a double dose to make up for a forgotten dose.

If you stop taking Repaglinide
Be aware that the desired effect is not achieved if you stop taking Repaglinide. Your diabetes may get worse. If any change of your treatment is necessary contact your doctor first.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

Possible side effects
Like all medicines, this medicine can cause side effects, although not everybody gets them.

Hypoglycaemia
The most frequent side effect is hypoglycaemia which may affect up to 1 in 10 patients (see section 4). Hypoglycaemic reactions are generally mild/moderate but may occasionally develop into hypoglycaemic unconsciousness or coma. If this happens, contact medical assistance immediately.

Allergy
Allergy is very rare (may affect up to 1 in 10,000 patients): Symptoms such as swelling, difficulty in breathing, rapid heartbeat, feeling dizzy and sweating could be signs of anaphylactic reaction. Contact a doctor immediately.

Other side effects
Common (may affect up to 1 in 10 patients):
- Stomach pain
- Diarrhoea.

Rare (may affect up to 1 in 1,000 patients):
- Acute coronary syndrome (but it may not be due to the medicine).

Very rare (may affect up to 1 in 10,000 patients):
- Vomiting
- Constipation
- Visual disturbances
- Severe liver problems, abnormal liver function such as increased liver enzymes in your blood.

Frequency not known
- Hypersensitivity (such as rash, itching skin, reddening of the skin, swelling of the skin)
- Feeling sick (nausea).

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard.

How to store
Keep this medicine out of the sight of and reach of children.

Do not use this medicine after the expiry date which is stated on the outer carton, tablet container and the blister after “EXP”. The expiry date refers to the last day of that month.

This medicinal product does not require any special storage precautions.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.

Contents of the pack and other information
What Repaglinide tablets contain
- The active substance is repaglinide. One tablet contains 0.5mg, 1mg or 2mg repaglinide.
- The other ingredients are: microcrystalline cellulose (E460), calcium hydrogen phosphate, anhydrous, povidone, sodium, glycine, magnesium stearate.

Repaglinide tablets 1mg contains iron oxide red E172.

Repaglinide tablets 2mg contains iron oxide red E172.

What Repaglinide tablets looks like and contents of the pack
Repaglinide tablets 0.5mg are white, round, bevelled and engraved with RE on one side. Repaglinide tablets 1mg are mottled yellow, round, bevelled and engraved with RE1 on one side.

Repaglinide tablets 2mg are mottled pink, round, bevelled and engraved with RE2 on one side.

Blisters (Aluminium/Aluminium).
Pack sizes: 30, 60, 90, 100, 120 and 180 tablets.

Plastic (polyethylene) container with desiccant canister filled with silica gel.

Pack sizes: 100 tablets.

Not all pack sizes may be marketed.
