Acriflex 0.25% w/w Cream
Chlorhexidine Gluconate

Important information about Acriflex
• This medicine treats minor burns, cuts, blisters and infected cracked skin.
• It can be used by adults, the elderly and children.
• Do not use……

Now read the rest of the leaflet before you use this medicine. It includes other information which might be especially important for you.
• Keep this leaflet. You may need to read it again.
• Ask your pharmacist if you need any more information or advice.
• If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

2. Before you use this medicine

Do not use Acriflex……

1. What the medicine is for
Acriflex is a cream which contains chlorhexidine gluconate, an antibacterial agent. It can be used to treat minor burns and scalds, abrasions, scratches, sunburn blisters or infected cracked skin.

3. How to use this medicine
Apply it to the skin as needed.
• Avoid contact with the eyes.
• Do not use in body cavities (e.g. mouth, vagina, inner ear).

Adults, the elderly and children
For general use
• Apply freely and smooth gently into the affected skin.
For cuts, abrasions or burns
• Spread freely and if necessary cover with a dressing.

If you swallow some…
If you accidentally swallow some, see a doctor straight away. Take the pack with you to show which medicine you have swallowed.

4. Possible side effects
Like all medicines, Acriflex can have side effects, although these don’t affect everyone.
If you experience any of the following reactions stop use and get immediate medical help:
Swelling of the face, lips, tongue and throat; a red itchy skin rash; wheezing or difficulty breathing; feeling faint and dizzy; a strange metallic taste in the mouth; collapse. You may be allergic to Acriflex.

If you notice these symptoms, stop using Acriflex and get immediate medical help:
If you are allergic (hypersensitive) to chlorhexidine gluconate or any of the other ingredients of Acriflex (see section 6).

Special warnings and precautions
Acriflex may in rare cases cause allergic reactions, leading to a drop in blood pressure and even to unconsciousness. Early symptoms of a severe allergic reaction may be a skin rash or asthma.

If you notice these symptoms, stop using Acriflex and contact your doctor as soon as possible.
(see under section 4: Possible side effects).

Pregnant or breastfeeding…
Ask your doctor or pharmacist for advice before using this medicine if you are pregnant, might be pregnant or are breastfeeding.

Important information about some of the ingredients
• This product contains cetostearyl alcohol which may cause local skin reactions (e.g. contact dermatitis).

4. Possible side effects
Like all medicines, Acriflex can have side effects, although these don’t affect everyone.
If you experience any of the following reactions stop use and get immediate medical help:
Swelling of the face, lips, tongue and throat; a red itchy skin rash; wheezing or difficulty breathing; feeling faint and dizzy; a strange metallic taste in the mouth; collapse. You may be having an allergic reaction.

If you notice any other side effect not included above, stop use and tell your doctor or pharmacist. They will tell you what to do.

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard. By reporting side effects you can help provide more information on the safety of this medicine.

5. Storing this medicine
• Keep it out of the sight and reach of children.
• There are no special conditions for storing this medicine.
• Do not use after the expiry date shown on the carton. The expiry date refers to the last day of that month.
• Medicine should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of any unused medicine. These measures will help to protect the environment.
