Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets

Read this leaflet carefully before you start taking this medicine. Keep this leaflet. You may need to read it again. If you have any further questions, ask your doctor or pharmacist. This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours. If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet.

In this leaflet:
1. WHAT TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE IS AND WHAT IT IS USED FOR
2. WHAT YOU NEED TO KNOW BEFORE YOU TAKE TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE 10 MG/2.5 MG TABLETS
3. How to take Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets
4. Possible side effects
5. How to store Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets
6. Contents of the pack and other information

1. WHAT TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE IS AND WHAT IT IS USED FOR

Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets are a combination of two medicines; one slows your heart rate and the other increases water removal from your body.

Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets are used to treat raised blood pressure. Your doctor has prescribed these tablets for you because your blood pressure is too high.

Do not take Timolol maleate/Bendroflumethiazide while you are breast-feeding.

Have portal hypertension (high blood pressure in your liver or vein) or have had in the past one of the following problems (an allergic condition which can cause joint pain, skin rashes and fever):
- Psoriasis (this is a skin disease with thickened patches of red skin, often with silvery scales).

Tell your doctor before you start treatment if you have:
- Are allergic (hypersensitive) to timolol maleate, bendroflumethiazide or any of the other ingredients of Timolol maleate/Bendroflumethiazide (these are listed in section 6, "Contents of the pack and other information").
- Are pregnant, or think that you might be pregnant.
- Are taking medicines used for relieving depression called 'hyperaldosteronism'.
- Are malnourished.
- Have muscle weakness (myasthenia gravis).
- Suffer from an overactive thyroid gland.
- Suffer from gout or systemic lupus erythematosus (an allergic condition which can cause joint pain, skin rashes and fever).
- Are taking medicines obtained without a prescription.
- Are malnourished.
- Have chronic adrenal insufficiency (Addison’s disease).
- Have controlled heart failure, a very slow heart rate, other heart problems or a certain type of angina called Prinzmetal’s angina.
- Have low blood pressure or problems with your blood circulation.
- Have a condition affecting your adrenal glands called phaeochromocytoma.
- Have a history of wheezing or asthma.
- Have serious kidney or liver problems.
- Have difficulty urinating.
- Have lower than normal potassium or sodium levels in your blood or higher than normal calcium levels in your blood even with treatment.
- Have high uric acid levels in your blood which may cause gout.
- Have chronic adrenal insufficiency (Addison’s disease).
- Have controlled heart failure, a very slow heart rate, other heart problems or a certain type of angina called Prinzmetal’s angina.
- Have low blood pressure or problems with your blood circulation.
- Have a condition affecting your adrenal glands called phaeochromocytoma.
- Have a condition that causes acidity of the blood called metabolic acidosis.
- Are taking medicines used for relieving depression such as lithium, monoamine oxidase inhibitors (e.g. selegiline, moclobemide) and tricyclic antidepressants (e.g. amitriptyline, lofepramine).
- Are pregnant, or think that you might be pregnant.

Warnings and Precautions
Tell your doctor before you start treatment if you have or have had in the past one of the following problems or if you develop any of these during treatment:
- Suffer from diabetes, low blood sugar levels (hypoglycaemia), heart, liver or kidney problems.
- Have portal hypertension (high blood pressure in the blood vessel to your liver).
- Have higher than normal potassium or sodium levels in your blood or lower than normal calcium levels in your blood even with treatment.
- Have swelling in your ankles, hands or eye area.
- Have non-serious kidney problems (see “Do not take Timolol maleate/Bendroflumethiazide” section above if you have serious kidney problems).
- Have a hormone condition called ‘hyperaldosteronism’.
- Are malnourished.
- Have muscle weakness (myasthenia gravis).
- Suffer from an overactive thyroid gland.
- Suffer from gout or systemic lupus erythematosus (an allergic condition which can cause joint pain, skin rashes and fever).
- Psoriasis (this is a skin disease with thickened patches of red skin, often with silvery scales).

2. WHAT YOU NEED TO KNOW BEFORE YOU TAKE TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE 10 MG/2.5 MG TABLETS

Do not take Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets if you:
- Are allergic (hypersensitive) to timolol maleate, bendroflumethiazide, any of the other ingredients of Timolol maleate/Bendroflumethiazide (these are listed in section 6, “Contents of the pack and other information”), or any medicine known as a thiazide diuretic.
- Have bronchial asthma or a chronic lung disease.
- Have a history of wheezing or asthma.
- Have serious kidney or liver problems.
- Have difficulty urinating.
- Have lower than normal potassium or sodium levels in your blood or higher than normal calcium levels in your blood even with treatment.
- Have high uric acid levels in your blood which may cause gout.
- Have chronic adrenal insufficiency (Addison’s disease).
- Have controlled heart failure, a very slow heart rate, other heart problems or a certain type of angina called Prinzmetal’s angina.
- Have low blood pressure or problems with your blood circulation.
- Have a condition affecting your adrenal glands called phaeochromocytoma.
- Have a condition that causes acidity of the blood called metabolic acidosis.
- Are taking medicines used for relieving depression such as lithium, monoamine oxidase inhibitors (e.g. selegiline, moclobemide) and tricyclic antidepressants (e.g. amitriptyline, lofepramine).
- Are pregnant, or think that you might be pregnant.

Taking Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets while you are pregnant or breast-feeding
You should avoid excessive alcohol consumption while taking Timolol maleate/Bendroflumethiazide.

Pregnancy and breast-feeding
Tell your doctor before you take any tablets if you are pregnant or breast-feeding. Also, tell your doctor if you become pregnant during treatment.
Do not take Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets if you are pregnant.

Your doctor will decide if you should take Timolol maleate/Bendroflumethiazide while you are breast-feeding.
Driving and using machines
This medicine may cause tiredness or dizziness as a side effect. Therefore you should be careful if you are going to drive or operate machinery.

3. HOW TO TAKE TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE 10 MG/ 2.5 MG TABLETS
Always take Timolol maleate/Bendroflumethiazide exactly as your doctor has told you. You should check with your doctor or pharmacist if you are not sure. The usual dose can vary from 1 to 4 tablets. You can take the tablets as a single dose in the morning or in two doses, one in the morning and the other in the evening. Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets should be swallowed whole with water.

If you take more Timolol maleate/ Bendroflumethiazide 10 mg/2.5 mg tablets than you should
If you or anyone else accidentally take more than the recommended dose of these tablets, call your doctor straight away or go to your nearest hospital casualty department.

If you forget to take Timolol maleate/ Bendroflumethiazide
If you forget to take your tablet(s), take the next dose as normal. Do not take a double dose to make up for forgotten tablet(s).

If you stop taking Timolol maleate/ Bendroflumethiazide
Keep taking the Timolol maleate/Bendroflumethiazide 10 mg/2.5 mg tablets for as long as your doctor tells you to. Do not stop taking them without consulting your doctor first. If it is right for you to stop taking Timolol maleate/Bendroflumethiazide then your doctor will probably reduce the dose gradually since it is important not to stop suddenly.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS
Like all medicines, Timolol maleate/ Bendroflumethiazide can cause side effects, although not everybody gets them.

Tell your doctor immediately if you experience severe abdominal pain and vomiting or you notice inflammation of your blood vessels (e.g. veins) accompanied by small red or purple, dry or crusty skin lesions on your legs, hands, or other parts of the body, and/or blue or violet fingers or toes.

Tell your doctor if you notice a skin rash, visual disturbances, or dry or crusty eyes. Your doctor may decide to change your treatment. If you have a skin rash, this may be associated with an increased sensitivity to sunlight.

Tell your doctor if you have any of the side effects mentioned below and you are concerned:
- Upset stomach, dizziness, tiredness, depression, weakness, sleeplessness, breathing difficulties, a slow heart beat or other heart problems.
- You may also experience tired or painful muscles, feel thirsty and pass less urine than normal.
- If you are short sighted this may get worse.
- Poor blood circulation which makes your toes and fingers numb and pale, low blood pressure, “pins and needles”, tingling in the hands or feet, a worsening of any problems with blood circulation in your legs or impotence (male erection problems).
- Painful joints.
- Nausea (feeling sick), vomiting (being sick), diarrhoea or abdominal pain.
- Vertigo or feeling faint, headaches, trouble with sleeping or nightmares.
- Depression, hallucinations, drowsiness, disorientation, confusion or other mental problems.

Some side effects will not normally be noticed. These include an increase in blood sugar and sugar in the urine (particularly in people who are diabetic), changes in levels of some substances in the blood, such as a decrease in potassium or an increase in urea, and changed blood cells. Your doctor may therefore need to do some tests.

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/ yellowcard

By reporting side effects you can help provide more information on the safety of this medicine.

5. HOW TO STORE TIMOLOL MALEATE/ BENDROFLUMETHIAZIDE 10 MG/2.5 MG TABLETS
Keep out of the sight and reach of children. Store Timolol maleate/ Bendroflumethiazide 10 mg/2.5 mg tablets below 25 °C.

Do not use Timolol maleate/Bendroflumethiazide after the expiry date which is stated on the bottle label and outer carton after the text “EXP”. The expiry date refers to the last day of that month.

Medicines must not be disposed of via wastewater or household waste.

Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.
