Captopril 5mg/5ml Oral Solution

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

1. What is Captopril Oral Solution and why is it used?

Captopril Oral Solution contains the active substance captopril, a medication called an angiotensin-converting enzyme (ACE) inhibitor. This medicine is used to help control blood pressure or to remove the blood from your body fluids, which then make it easier for the heart and the other organs to work normally.

Captopril is used to treat the following in adults, the elderly and children:

• High blood pressure (hypertension)

• Blood in the urine related to kidney disorders (hematuria)

• High blood pressure in kidney disease (essential hypertension)

• High blood pressure in people with diabetes (diabetic hypertension)

• High blood pressure in people who have survived a heart attack (post-myocardial infarction hypertension)

• High blood pressure in patients who had a renal transplant (transplant hypertension)

• High blood pressure in people undergoing dialysis (dialysis hypertension)

• 1 mL syringe graduated with numbered scale.

• Plastic syringe adapted from the following:

• Turn the bottle upside down.

• Open the bottle: press the cap firmly and pull to open the bottle.

• Take the cap off and fit the plastic syringe adapter from the cap set to the end of the plastic syringe.

• Place the cap between the fingers and turn the container to face the cap.

• Remove the cap: place the cap on the syringe.

• Insert plunger into the syringe and turn to release the dose into the syringe.

• Release the plunger and remove the plastic syringe adapter from the syringe.
