skin redictions such as rediction incrineredate tragerlike or circular patches on the trunk, with central blisters, skin peeling, ulcers of mouth, throat, nose, genitals and eyes. Th serious skin rashes can be preceded by fe and flultike symptoms (exfoliative dermatitis erythema multiforme, Stevens-Johnson syndrome, toxic epidermal necrolysis).

stiff neck, headache, nausea, vomiting, fever and disorientation

face, tongue or throat swelling (these can be signs of serious allergic reactions).

signs of serious allergic reactions). A severe skin reaction known as DRESS [Drug reaction with easinophilia and systemic symptoms of syndrome can occur. Symptoms of DRESS include: skin resh, fewer, swelling of DRESS include: skin resh, fewer, swelling of Jymph nodes and an increase of easinophilis (a type of white blood calls). A red., scaly widespread rash with bumps under the skin and blisters mainly localised on the skin folds, truth, and upper extremilies accompanied by fewer at the initiation of

treatment (acute generalised exanthematou pustulosis) (frequency not known). See also

Like all medicines, this medicine can cause side-effects, although not everybody gets them. your doctor or pharmacist if you notice any of translations.

ur doctor or pharmacist if you notice any of the lowing:
User, kidney problems or difficulty urinating.
User, kidney problems or difficulty urinating than recommended doses or for a prolonged period of time, can cause damage to your kidneys and affect them removing acids properly from your blood into the urine (renal lubular ocidosis). It can also cause very low levels of potassium in your blood (See section 2.). This is a very serious condition and will require immediate treatment. Signs and symptoms include muscle weakness and lighth-headedness.

If your child experiences any of the following side effects, stop giving this medicine and tell your doctor:

unexplained stomach pain, indigestion, heartburn, nausea or vomiting

yellowing of the eyes, pale stools and dark urine (these can be signs of kidney or liver

severe sore throat with high fever

unexplained bruising or bleeding, tiredness, getting more infections than normal, such as mouth ulcers, colds, sore throat, fever. (These can be signs of anaemia or other blood

Other side effects which may occur are

Rare: may affect up to 1 in 1,000 people
diarrhoea, wind or constipation. Tell your doctor if these last for more than a few days become troublesome

Very rare: may affect up to 1 in 10,000 people

kidney or liver problems may occur with
ibunsefer.

ibuprofen stroke or heart problems may occur with ibuprofen. This is unlikely at the dose level given to children

high blood pressure stomach ulcer, bleeding of the stomach, inflammation of the stomach lining

Not known: frequency cannot be estimated from the available data:

me available data:

• in exceptional cases, serious inflections of the skin and soft tissues have occurred during chicken pax (varicella)

• chest pain, which can be a sign of a potentially serious allergic reaction called Kounis syndrome

• skin becomes sensitive to light
