The 50mg tablet also contains: indigo carmine (E132), lactose monohydrate (E901), gelatin (E444), sorbic acid (E202), and polysorbate 80 (E171).

The active substance in Amitriptyline tablets is called triyclic antidepressants, which are used to treat depression, especially if you have severe depression, such as major depression.

Amitriptyline belongs to a group of medicines called triyclic antidepressants and is used to treat depression, especially if you have severe depression, such as major depression.

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

How to store Amitriptyline tablets
- Keep this medicine out of the sight and reach of children.
- Store below 25°C in a dry place, protected from light.
- Do not use Amitriptyline tablets after the expiry date stated on the carton. The expiry date refers to the last day of that month.
- Do not throw away any medicines via household waste.
- Ask your pharmacist how to throw away medicine you no longer use. These measures will help protect the environment.
