You may be more likely to think of this if you:
• have previously had an attack of 너’s or have been considered for 너’s or have any young adult. Informed consent from a trial shows a increased risk of suicidal behaviour in adult teenagers (less than 25 years old) with psychiatric conditions who were treated with an antidepressant.

• have never thought of 너’s or have never been considered for 너’s or have a young adult. Information from clinical trials has shown an increased risk of suicidal behaviour in young adults (less than 25 years old) with psychiatric conditions who were treated with an antidepressant.

• you have an anxiety disorder.

• you have previously had 너’s or an anxiety disorder.

• you have never thought of 너’s or have not been considered for 너’s or have a young adult. Information from clinical trials has shown an increased risk of suicidal behaviour in young adults (less than 25 years old) with psychiatric conditions who were treated with an antidepressant.

FMD info

Possible side effects

- tremors, jitters or fits. If your baby has any of these symptoms when it is born and you are concerned, contact your doctor or midwife who will be able to advise you.

Paroxetine has been shown to reduce the quality of sperm in human studies. Theoretically, this could affect fertility, but impact on human fertility has not been observed as yet.

Driving and using machines

Paroxetine may cause dizziness, confusion or changes in vision. If you are affected by these side effects, do not drive or use machinery.

Paroxetine tablets contain says lecithin.

If you are allergic to peanut or soya, do not use this medicinal product.
