Hydrocortisone 0.5% and 1.0% cream

What Hydrocortisone cream is and what it is used for

Hydrocortisone belongs to a group of medicines called topical corticosteroids. These work by calming the inflammation that occurs during certain skin conditions or reactions. Hydrocortisone cream may be used for treating various skin conditions including:

- eczema
- dermatitis, including intertrigo (infection between skinfolds)
- insect bite reactions
- inflammation of the external ear (otitis externa)
- prurigo nodularis - a long term skin condition where very itchy lumps appear
- neurodermatitis - a long term skin condition where itchy skin becomes thick due to scratching
- nappy rash, if there is no infection present, or existing infection is being treated with appropriate antibiotics

What you need to know before you use Hydrocortisone cream

Do not use Hydrocortisone cream if you:

- are allergic (hypersensitive) to hydrocortisone or any of the other ingredients of this medicine
- have any other skin infection such as athlete’s foot (tinea pedis), chickenpox (varicella), shingles (Herpes zoster), cold sores (Herpes simplex), impetigo, ringworm or thrush, infected lesions, ulcerative conditions, red appearance on face, pen-eal dermatitis or acne.

Warnings and precautions

Talk to your doctor or pharmacist before you start to use this medicine if you:

- have psoriasis, the condition may become worse after stopping long-term treatment
- will be applying the cream to your face, particularly around the eyes. This cream should not be used for long on the face as it may damage the facial skin
- will be using the cream for the treatment of dermatitis or nappy rash on children and infants. Treatment in infants should be limited to five to seven days.
- are using this cream under occlusive dressing that can considerably increase the absorption of this cream.
- have a skin infection. If the condition appears to be getting worse despite using antibiotics prescribed, stop using the cream and contact your doctor.

Caution should be taken to keep away from the eyes. Contact your doctor if you experience blurred vision or other visual disturbances.

If this product comes into contact with dressings, clothing and bedding, the fabric can be easily ignited with a naked flame. You should keep away from fire when using the product.

Pregnancy and breast-feeding

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine.

Hydrocortisone cream contains cetostearyl alcohol and chlorocresol. This cream contains cetostearyl alcohol which may cause local skin reactions such as contact dermatitis and chlorocresol which may cause allergic reactions in some people.

How to use Hydrocortisone cream
Always use Hydrocortisone cream exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

For application to the skin.
The recommended dose is:
- Adults - gently apply a thin layer of cream to the affected area(s) two or three times a day.
- Children and infants - gently apply a thin layer of cream to the affected area(s) two or three times a day. Avoid using for more than five to seven days at a time.

If you use more Hydrocortisone cream than you should:
- Do not use the cream more often or for longer than your doctor tells you to.
- Do not use larger quantities than as directed, as this will increase the possibility of side effects.
- If you accidentally use too much on a few occasions do not worry.
- If you accidentally swallow some cream, small amounts are not harmful.
- If you squeeze out too much cream, wipe off the excess with a paper towel. Do not use the cream under airtight dressings (such as plasters) or nappies, as too much hydrocortisone may be absorbed and may result in adverse effects upon adrenal gland function.

If you forget to use Hydrocortisone Cream:
If you forget to use the cream, apply it as soon as you remember, unless it is nearly time to apply the next dose.

Possible side effects
Like all medicines, Hydrocortisone Cream can cause side effects, although not everybody gets them. Most patients using Hydrocortisone Cream will have no problems when used in the correct amount for the prescribed time. If the following happens, stop using the cream and tell your doctor immediately or go to the casualty department at your nearest hospital:
- an allergic reaction (swelling of the lips, face or neck leading to severe difficulty in breathing, skin rash or hives). This is a very serious but rare side effect. You may need urgent medical attention or hospitalisation.
- blurred vision. This side effect has been reported, but the frequency for it to occur is not known. If your condition becomes worse during treatment, you may have an allergy to one of the ingredients of the cream or an infection. Stop using the cream and tell your doctor as soon as possible.

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store. By reporting side effects you can help provide more information on the safety of this medicine.

How to store Hydrocortisone cream
Keep out of the sight and reach of children. Store below 25°C. Do not freeze.

Do not use Hydrocortisone cream after the expiry date stated on the label carton/bottle. The expiry date refers to the last day of that month.

Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.
