Spironolactone 25mg, 50mg and 100mg tablets

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

1. What Spironolactone tablets are and what they are used for

2. What you need to know before you take Spironolactone tablets

3. How to take Spironolactone tablets

4. Possible side effects

5. How to store Spironolactone tablets

6. Contents of the pack and other information

What Spironolactone tablets are and what they are used for

Spironolactone tablets belong to a group of medicines called potassium-sparing diuretics (water tablets), which help you lose excess fluid from your body. They may be used for:
- congestive heart failure
- nephrotic syndrome (a kidney disorder)
- liver cirrhosis with fluid retention (oedema) and swelling of the abdomen (ascites)
- a cancerous disease with swelling of the abdomen (malignant ascites)
- diagnosis and treatment of primary aldosteronism (a condition where excess hormone is produced).

Children should only be treated under guidance of a paediatric specialist.

What you need to know before you take Spironolactone tablets

Do not take spironolactone tablets and tell your doctor if you:
- are allergic to spironolactone or any of the other ingredients of this medicine (listed in section 6)
- have Addison’s disease (weakness, loss of energy, low blood pressure and dark pigmentation of the skin)
- have severe kidney disease
- have high blood levels of potassium
- are not passing urine
- are breast-feeding
- are taking water tablets (potassium sparing diuretics) or any potassium supplements
- are taking spironolactone (a medicine for high blood pressure).

Children with moderate to severe kidney disease must not take spironolactone tablets.

Possible side effects

The most common side effects of spironolactone tablets are:
- swelling of the abdomen (oedema)
- dizziness
- stomach pain
- muscular weakness
- high blood pressure
- feeling generally unwell
- changes in weight
- swelling of hands and feet
- diarrhoea
- dark urine
- craving for sweets (amniorrhoea)
- breast pain
- general discomfort
- rash
- itching
- hair loss
- problems with vision
- infection
- nausea
- headache
- cough

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

How to store Spironolactone tablets

Store Spironolactone tablets in the original container.

Contents of the pack and other information

Pack size:
- 25mg tablets: 28 tablets
- 50mg tablets: 28 tablets
- 100mg tablets: 28 tablets

What to do if you think you have taken too much Spironolactone tablets

If you take too much spironolactone tablets, get medical help straight away, even if you do not feel ill.

What happens if you take Spironolactone tablets during pregnancy

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine. Spironolactone tablets should not be taken if you are breast-feeding.

What to do if you get an allergic reaction

If you get a severe allergic reaction, stop taking spironolactone tablets and get medical help straight away.
How to take Spironolactone tablets

Always take this medicine exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

The pharmacist’s label on the pack also gives this information. The number of tablets you need to take depends on your illness.

Recommended dose
This medicine should be taken once a day with food.

Adults
The adult dose varies from 25mg to 400mg spironolactone a day, depending on the condition being treated. If you are not sure how much to take, ask your doctor or pharmacist.

Elderly
Your doctor will start you on a low starting dose and gradually increase the dosage as needed to obtain the desired effect.

Use in children and adolescents
If you are giving Spironolactone Tablets to a child, the number of tablets you give will depend on the child’s weight. Your doctor will work out the number of tablets that you should give.

If you take more Spironolactone tablets than you should
If you (or someone else) swallow a lot of tablets at the same time, or you think a child may have swallowed any, contact your nearest hospital casualty department or tell your doctor immediately. Symptoms of an overdose include drowsiness, mental confusion, feeling or being sick, dizziness, diarrhoea, decreased blood levels of sodium, increased blood levels of potassium (symptoms include pains and needles’ or tingling, unusual tiredness or weakness, muscle weakness, paralyses with a loss of muscle tone, muscle spasm) and may have skin rashes that will appear as flat red areas of skin with overlapping small raised bumps.

If you forget to take Spironolactone tablets
If you forget to take a dose, take it as soon as you remember it and then take the next dose at the right time. Do not take a double dose to make up for a forgotten dose.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

Possible side effects
Like all medicines, this medicine can cause side effects, although not everybody gets them.

Stop taking Spironolactone and contact your doctor at once if you develop:

- high blood levels of potassium (muscle twitching or weakness, irregular heart beat, unusual tiredness or weakness, paralyses with or without loss of muscle tone, circulatory failure), especially if you have impaired kidney function or a diet high in potassium.

- severe form of skin rash with flushing, fever, blisters or ulcers (Stevens-Johnson syndrome).

- severe rash involving reddening, peeling and swelling of the skin that resembles severe burns (Toxic epidermal necrolysis).

- Drug Reaction with Eosinophilia and Systemic Symptoms (DRESS). DRESS appears initially as flu-like symptoms with a rash on the face and then with an extended rash, high temperature, enlarged lymph nodes, increased levels of liver enzymes seen in blood tests and an increase in a type of white blood cell (eosinophilia).

Tell your doctor or pharmacist if you notice any of the following side effects, they get worse or if you notice anything not listed:

- Blood: increase in blood levels of nitrogen or urea especially in those with impaired kidney function, altered numbers and types of blood cells. If you notice increased bruising, nosebleeds, sore throats or infections, you should tell your doctor who may want you to have a blood test.

- Metabolism and nutrition: low blood levels of sodium, changes in the levels of chemicals in the body.

- Nervous system: lack of muscle control or coordination, drowsiness, dizziness, headaches, clumsiness.

- Psychiatric: tiredness, confusion.

- Liver: impaired liver function, a poisonous effect on the liver.

- Stomach and intestines: stomach upset, inflammation of the stomach lining, bleeding in the stomach, stomach or intestinal ulcers, stomach cramps, diarrhoea, feeling or being sick.

- Skin: skin rashes including pale or red irregular raised patches with severe itching (hives), hair loss, excessive hair growth, itchy rash, peripheral oedema (condition presenting with fluid-filled blisters on the skin).

- Muscle and bone: bone softening due to vitamin D deficiency, leg cramps.

- Kidneys: acute kidney failure particularly in those who already have impaired kidney function.

- Reproductive system: enlarged breasts in men, changes in voice pitch, reduced sexual potency in men, changes in sexual drive/ability, breast tenderness, breast lumps and increased hair growth in females, irregular periods, sweating.

- Other: feeling of general discomfort and illness.

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store.

By reporting side effects you can help provide more information on the safety of the medicine.

How to store Spironolactone tablets
Keep out of the sight and reach of children.

Do not store above 25°C.

Store in the original package.

Keep container in the outer carton.

Do not use this medicine after the expiry date which is stated on the label/carton/ bottle. The expiry date refers to the last day of that month.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.
