Trimethoprim 100mg and 200mg tablets

Read all of this leaflet carefully before you start taking this medicine.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours.

1 What Trimethoprim tablets are and what they are used for
Trimethoprim is a type of antibacterial medicine which works by killing bacteria. Trimethoprim tablets may be used:
- to treat a wide range of infections including urinary infections and respiratory tract infections.
- for long-term prevention of recurrent urinary tract infections.

2 Before you take
Do not take Trimethoprim tablets and tell your doctor if you:
- are allergic (hypersensitive) to trimethoprim or any of the other ingredients in the tablet (see section 6).
- are pregnant.
- have any blood disorder
- have severe kidney disease
- have severe liver disease
- Trimethoprim should not be given to premature babies or babies during the first few weeks of life.

Check with your doctor or pharmacist before taking Trimethoprim tablets if you have:
- kidney disease or are having dialysis treatment
- a deficiency of folic acid (may cause anaemia).

3 How to take
Always take Trimethoprim tablets exactly as your doctor has told you. If you are not sure, check with your doctor or pharmacist.

Swallow the tablets with a glass of water at the same times each day.

Doses:
- Severe or sudden infections: (e.g. uncomplicated bacterial cystitis in women) treatment will usually be between 3-14 days, according to the type and severity of infection.

Your doctor may double your first dose:
- Adults and children over 12 years: 200mg twice a day.
- Children 6-12 years: 100mg twice a day.
- Children under 6 years: Not recommended; a more suitable dosage form should be used in this age group.

Possible side effects
Trimethoprim may cause less common side effects in some people.

- Changes in blood test results

If you have been told you have an intolerance to some sugars, contact your doctor before taking this medicine, as it contains a type of sugar called lactose.

9 Taking other medicines

Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription. Especially:
- antibiotics such as rifampicin
- anticoagulants to prevent your blood clotting such as warfarin
digoxin (to treat heart conditions)
- phenytoin (to treat epilepsy)
pymethamine or dapsone (to treat malaria)
- immunosuppressant drugs -used in cancer treatment (e.g. methotrexate) or to treat organ rejection after transplant (e.g. azathioprine or ciclosporin)
- bone marrow depressants
- spironolactone (to treat fluid build up)
- repaglinide (to treat diabetes)
diuretics (e.g. water tablets such as frusemide or eplerenone)
- procainamide, to treat abnormal heart rhythm.

Pregnancy and breast-feeding
Trimethoprim should not be used in pregnancy. If you are breast-feeding, ask your doctor or pharmacist for advice before taking this medicine.

Sugar intolerance

If you have been told you have an intolerance to some sugars, contact your doctor before taking this medicine, as it contains a type of sugar called lactose.

Blood tests

If you are having treatment over a long time, your doctor may carry out regular blood tests.

Version 2
01.11.2017
**Possible side effects**

Like all medicines, Trimethoprim tablets can cause side effects, although not everybody gets them. Please tell your doctor or pharmacist if you notice any of the following effects or any effects not listed.

**STOP taking this medicine and contact your doctor or go to your nearest hospital casualty department IMMEDIATELY if you notice any of the following symptoms:**
- difficulty breathing, swelling of the face, lips, tongue and throat
- chest pain, shock, fainting or collapse
- blistering/peeling of the skin, skin eruptions/lesions, deep swelling of the skin (angioedema)
- pancreatitis (signs may include a sudden, severe upper abdominal pain)

**Tell your doctor or pharmacist if you notice any of the following side effects:**

**Very Common** (may affect more than 1 in 10 people)
- high levels of potassium in the blood (may result in abnormal heart rhythm)

**Common** (may affect up to 1 in 10 people)
- feeling and being sick, diarrhoea
- headache
- skin rashes, urticaria
- anaemia (may cause you to feel tired and look pale), sore throats or mouth ulcers (due to a decrease in white blood cells), thrush

**Very rare** (may affect up to 1 in 10,000 people)
- constipation, severe watery/bloody diarrhoea
- cough
- agitation, abnormal behaviour
- septic meningoitis can occur in some patients. This may show as a combination of symptoms such as headache, fever, stiff neck, tiredness, feeling ill and your eyes become very sensitive to bright light
- kidney problems (signs may include painful urination or blood in the urine)
- dizziness, tiredness
- convulsions, involuntary movements, pins and needles, shakiness, tremors
- ringing in the ears, vertigo

**How to store**

Keep out of the reach and sight of children. Store below 25°C in a dry place.

Do not use Trimethoprim tablets after the expiry date stated on the label/carton/bottle. The expiry date refers to the last day of that month.

Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.

**Reporting of side effects**

By reporting side effects you can help provide more information on the safety of this medicine.

- Children 6-12 years: 50mg at night. The usual dose is around 2mg per kg body weight of the child per day.
- Adults and children over 12 years: 100mg at night.

**Elderly: doses may be reduced in elderly patients, according to kidney function.**

**If you take more than you should**

If you (or someone else) swallow a lot of tablets at the same time, or you think a child may have swallowed any contact your nearest hospital casualty department or tell your doctor immediately.

**If you forget to take the tablets**

If you forgot to take a dose take it as soon as you remember it and then take the next dose at the right time. Do not take a double dose to make up for a forgotten dose.

**If you stop taking the tablets**

Do not stop taking Trimethoprim tablets because you feel better. Take the tablets for as long as your doctor has told you or your problem may come back.

- Low blood sugar, low levels of sodium in the blood (may cause nausea, tiredness, muscle cramping)
- anorexia
- depression, anxiety, sleeping difficulties and nightmares, confusion, hallucinations
