Read all of this leaflet carefully before you (or a child in your care) start using this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.

This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.

- If you get any side effects talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

In the next sections, the word 'you' means you or a child in your care.

What is in this leaflet
1. What Latanoprost eye drops are and what they are used for
2. What you need to know before you use Latanoprost eye drops
3. How to use Latanoprost eye drops
4. Possible side effects
5. How to store Latanoprost eye drops
6. Contents of the pack and other information

1 WHAT LATANOPROST EYE DROPS ARE AND WHAT THEY ARE USED FOR

Latanoprost belongs to a group of medicines called prostaglandin analogues.

Latanoprost eye drops lower the pressure within your eye by increasing the natural flow of fluid from inside the eye into the blood stream.

Latanoprost eye drops are used to treat open angle glaucoma and ocular hypertension. These conditions are caused by an increase in the pressure in your eye, because this may increase the pressure in your eye(s).

If you have to use other eye drops you should wait for at least 5 minutes before using them.

Pregnancy, breastfeeding and fertility
If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine.

Latanoprost eye drops should not be used during pregnancy.

Latanoprost may pass into breast milk and should not be used when breast feeding.

Driving and using machines
When you use Latanoprost eye drops you might have blurred vision, for a short time. If this happens to you, do not drive or use any tools or machines until your vision becomes clear again.

Latanoprost eye drops contain benzalkonium chloride. This preservative may cause eye irritation and can discolor soft contact lenses.

3 HOW TO USE LATANOPROST EYE DROPS

Always use Latanoprost eye drops exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

The recommended dose for adults (including elderly) and children over 12 years of age is 1 drop of Latanoprost eye drops dropped into the affected eye(s) once daily. The best time to do this is in the evening.

How to use Latanoprost eye drops
Follow the steps below to help you use Latanoprost eye drops properly.

1. Wash your hands and sit or stand comfortably.
2. Unscrew the outer protective cap.
3. Use your finger to gently pull down the lower eyelid of your affected eye.
4. Place the tip of the bottle close to, but not touching your eye.
5. Squeeze the bottle gently so that only one drop goes into your eye and then release the lower eyelid.
6. Press a finger against the corner of the affected eye by the nose.
7. Hold for 1 minute whilst keeping the eye closed.
8. Repeat in your other eye if your doctor has told you to do this.
9. Put the cap back on the bottle.

If you use Latanoprost eye drops with other eye drops Wait at least 5 minutes between using Latanoprost eye drops and taking other eye drops.

Contact lens wearers
If you wear contact lenses, they should be removed before using Latanoprost eye drops. After using Latanoprost eye drops you should wait 15 minutes before putting the contact lenses back in.

If you use more Latanoprost eye drops than you should
If you put too many drops in your eye, you may feel some slight irritation in the eye or have some redness around the eye. If this does not stop or Latanoprost eye drops are accidentally swallowed contact your doctor as soon as possible.

Do not use Latanoprost eye drops more often than once a day, because the effectiveness of the treatment can be reduced if you administer it more often.

If you forget to use Latanoprost eye drops
If you forget to apply your drops at the usual time, just skip that dose. Do not take a double dose to make up for the missed dose. Instead, just wait until the next time you should be taking your drops.

you are supposed to take it, and then take your normal dose.

If you stop using Latanoprost eye drops Latanoprost eye drops should be used until your doctor tells you to stop. If you stop using this medicine the pressure in your eye could increase.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4 POSSIBLE SIDE EFFECTS

Like all medicines, this medicine can cause side effects, although not everybody gets them. The following are known side effects of using Latanoprost eye drops.

Very Common (may affect more than 1 in 10 people):
- A gradual change in your eye colour by increasing the amount of brown pigment in the coloured part of the eye known as the iris. If you have mixed colour eyes (blue-brown, grey-brown, green-brown or green-brown) you are more likely to see this change than if you have eyes of one colour (blue, grey, green or brown eyes). Any changes in your eye colour may take years to develop although it is normally seen within 8 months of treatment. The colour change may be permanent and may be more noticeable if you use Latanoprost eye drops in only one eye. There appears to be no problems associated with the change in eye colour. The eye colour change does not continue after Latanoprost eye drops treatment is stopped.
- Redness of the eye.
- Eye irritation (a feeling of burning, grittiness, itching, stinging or the sensation of a foreign body in the eye). If you experience eye irritation severe enough to make your eyes water excessively, or make you consider stopping this medicine, talk to your doctor, pharmacist or nurse promptly (within a week). You may need your treatment to be reviewed to ensure you keep receiving appropriate treatment for your condition.

Common (may affect up to 1 in 100 people):
- Irritation or disruption to the surface of the treated eye, seen mostly in people of Japanese origin. These changes involve an increase of the colour (darkening), length, thickness and number of your eyelashes.
- Eyelid swelling, dryness of the eye, inflammation or irritation of the surface of the eye (keratitis), blurred vision, inflammation of the coloured part of the eye (uveitis), swelling of the retina (macular oedema).

Uncommon (may affect up to 1 in 100 people):
- Eyelid swelling, dryness of the eye, inflammation or irritation of the surface of the eye (keratitis), blurred vision, inflammation of the coloured part of the eye (uveitis), swelling of the retina (macular oedema).
- Skin rash.
- Chest pain (angina), awareness of heart rhythm (palpitations).
- Asthma, shortness of breath (dyspnoea).
- Chest pain.
- Headache, dizziness.
- Muscle pain, joint pain.

Rare (may affect up to 1 in 1,000 people):
- Inflammation of the iris (iritis), symptoms of swelling or scratching/damage to the surface of the eye, swelling around the eye (periorbital oedema), misdirected eyelashes or an extra row of eyelashes, scarring of the surface of the eye, fluid filled area within the coloured part of the eye (cyst).
- Skin reactions on the eyelids, darkening of the skin of the eyelids.
- Worsening of asthma.
- Severe itching of the skin.
- Developing a viral infection of the eye caused by the herpes simplex virus (HSV).

Very rare (may affect up to 1 in 10,000 people):
- Worsening of angina in patients who also have heart disease, sunken eye appearance (eye sulcus deepening).

Side effects seen more often in children compared to adults are runny itchy nose and fever.

In very rare cases, some patients with severe damage to the clear layer at the front of the eye (the cornea) have developed cloudy patches on the cornea due to calcium build-up during treatment.

Reporting side effects
If you get any side effects talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme: www.mhra.gov.uk/yellowcard.

By reporting side effects you can help provide more information on the safety of this medicine.

5 HOW TO STORE LATANOPROST EYE DROPS

Keep this medicine out of the sight and reach of children.

Do not use this medicine after the expiry date which is stated on the carton (EXP). The expiry date refers to the last day of that month.

Store in a refrigerator (2 °C – 8 °C).

Keep the bottle in the outer carton in order to protect from light.

After first opening the bottle: do not store above 25 °C and use within four weeks.

Do not use Latanoprost eye drops if you notice the bottle is damaged or eye drops don’t look right in some other way.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.
