1. What Fenistil Cold Sore Cream is and what it is used for

Fenistil Cold Sore Cream is a smooth white cream. It is available as 2 g aluminium tubes.

Fenistil Cold Sore Cream is indicated for the treatment of cold sores on the lips and face. It is not recommended for the treatment of children under 12 years of age.

Fenistil Cold Sore Cream contains the active substance penciclovir. One gram of Fenistil contains 10 mg Penciclovir.

Fenistil Cold Sore Cream is not recommended for the treatment of children under 12 years of age.

2. What you need to know before you use Fenistil Cold Sore Cream

You must talk to a doctor if you do not feel better or if you feel worse after 4 days.

3. How to use Fenistil Cold Sore Cream

Apply the next application as soon as you remember and carry on as before. Do not apply more cream to make up for the forgotten application.

If you accidentally swallow Fenistil Cold Sore Cream

Do not give this cream to other people, even if their symptoms are the same as yours.

• Avoid breaking the blisters or picking sores, as this may prolong the healing process.
• Avoid oral sex.
• Avoid kissing, especially children.

Remember cold sores are infectious.

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. Some of the side effects may be serious. In the following section, you should be able to find the most common side effects listed.

4. Possible side effects
