Package leaflet: Information for the user
Easyhaler Salbutamol Sulfate
100 and 200 micrograms/dose inhalation powder
 salbutamol sulfate (salbutamol)

Read all of this leaflet carefully before you start using this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor, pharmacist or asthma nurse.
- This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

1. What Easyhaler Salbutamol is and what it is used for
2. What you need to know before you use Easyhaler Salbutamol
3. How to use Easyhaler Salbutamol
4. Possible side effects
5. How to store Easyhaler Salbutamol
6. Contents of the pack and other information

1. What Easyhaler Salbutamol is and what it is used for

What is Easyhaler Salbutamol?

Easyhaler Salbutamol is a “reliever” inhaler. The active ingredient is salbutamol, an asthma medicine, which opens up the airways. Salbutamol has a quick effect and a short duration of action (4 to 6 hours).

What is Easyhaler Salbutamol used for?

Salbutamol is used to relieve symptoms of asthma and other asthma-like conditions such as chest tightness, wheezing and coughing in adults and children aged 4 years and over. It is also used for

prevention of asthma symptoms brought on by exercise or a known allergen exposure that cannot be avoided.

2. What you need to know before you use Easyhaler Salbutamol

Do not use Easyhaler Salbutamol:

- if you are allergic to salbutamol or the other ingredient of this medicine (listed in section 6), which is lactose (which contains small amounts of milk protein)
- if you unexpectedly go into early labour (premature labour) or threatened abortion

Warnings and precautions

Talk to your doctor, nurse or pharmacist before using Easyhaler Salbutamol if you have any of the following:

- any diseases affecting the heart or blood vessels
- any infection in your lungs
- overactivity of the thyroid gland
- low levels of potassium in your blood
- diabetes
- hereditary problems of galactose intolerance, the Lapp lactase deficiency or glucose-galactose malabsorption, you should not take this medicine.

Other medicines and Easyhaler Salbutamol

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines.

In particular it is important to tell your doctor if you are currently taking any of the following medicines:

- medicines for your breathing problems for example theophylline or aminophylline (xanthines)
- corticosteroids
- beta-blockers for your blood pressure e.g. propranolol
- medicines for depression
- water tablets (diuretics) and other medicines for heart problems

If you already use “preventor” medication e.g. inhaled corticosteroid, it is important to continue using it regularly, even if you feel better.

Pregnancy and breast-feeding

Easyhaler Salbutamol should not be used if you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, unless you are advised to do so by your doctor. Ask your doctor or pharmacist for advice before taking this medicine.

Driving and using machines

Easyhaler Salbutamol will normally not affect your ability to drive or operate machinery (no formal studies have been carried out).

However, if you experience side effects such as dizziness, increased or uneven heart rate, muscle cramps or muscle pain or if you feel a bit shaky, your ability to drive or operate machinery may be affected.

Easyhaler Salbutamol contains lactose

Lactose contains small amounts of milk proteins, which may cause allergic reaction. If you have been told that you do not tolerate certain kinds of sugars, contact your doctor before taking this medicine. The amount of lactose in Easyhaler Salbutamol (less than 10 mg per dose) does not normally cause problems in lactose intolerant people.

3. How to use Easyhaler Salbutamol

You will be shown how to use the Easyhaler by your doctor or asthma nurse. Always use this medicine exactly as your doctor or asthma nurse has told you. Check with your doctor or asthma nurse if you are not sure how to use the Easyhaler, how many puffs (actuations) to take or how often to take it.

IMPORTANT-contact your doctor immediately if:

- you need to use this “reliever” inhaler more often than usual
- you need to use your “reliever” more than twice a week
- your wheeziness or chest tightness is worse than usual.

Easyhaler Salbutamol should be used as required rather than regularly.

If your asthma is active (for example you have frequent symptoms or flare ups, such as breathlessness that makes speaking, eating or sleeping difficult, cough, wheezing, tight chest or limited physical ability), you should tell your doctor right away who may start or increase a medicine to control your asthma such as an inhaled corticosteroid.

Tell your doctor as soon as possible if your medicine does not seem to be working as well as usual (for example you need higher doses to relieve your breathing problems or your inhaler fails to give relief for at least 3 hours) as your asthma may be getting worse and you may need a different medicine.

If you use Easyhaler Salbutamol more than twice a week to treat your asthma symptoms, not including preventive use before exercise, this indicates poorly controlled asthma and may increase the risk of severe asthma attacks (worsening of asthma) that can have serious complications and may be life-threatening or even fatal. You should contact your doctor as soon as possible to review your asthma treatment.

If you use a medicine against inflammation of your lungs daily, e.g., “inhaled corticosteroid”, it is important to continue using it regularly, even if you feel better.

The recommended dose for Easyhaler Salbutamol 100 mcg is:

Adults, Older people and Adolescents aged 12 years and over:

For the relief of symptoms of acute asthma attack and intermittent asthma the starting dose is one puff (100mcg) that may be increased to two puffs (200mcg). To prevent symptoms before exercise or contact with whatever triggers your asthma attack the starting dose is two puffs (200mcg) that may be increased to four puffs (400mcg).

Children aged 4 to 11 years:

For the relief of symptoms of acute asthma attack and intermittent asthma the dose is one puff (100mcg) as required. This may be increased to two puffs (200mcg) if required.

To prevent symptoms before exercise or contact with whatever triggers your asthma attack the dose is one puff (100mcg). This may be increased to two puffs (200mcg) if required.

For regular treatment the dose is up to two puffs (200mcg) up to 4 times a day.
Children should always have adult supervision when using the Easyhaler

The maximum daily dose (in 24 hours) for both adults and children aged 4 years and over: 8 puffs of the 100 mcg (800 micrograms).

The recommended dose for Easyhaler Salbutamol 200 mcg is:

Adults, Older people and Adolescents aged 12 years and over:

For the relief of symptoms of acute asthma attack and intermittent asthma the starting dose is one puff (200mcg) that may be increased to two puffs (400mcg). To prevent symptoms before exercise or contact with whatever triggers your asthma attack the starting dose is one puff (200mcg) that may be increased to two puffs (400mcg).

Children aged 4 to 11 years:

For the relief of symptoms of acute asthma attack and intermittent asthma the dose is one puff (200mcg) as required.

To prevent symptoms before exercise or contact with whatever triggers your asthma attack the dose is one puff (200mcg).

For regular treatment the dose is one puff (200mcg) up to 4 times a day.

Children should always have adult supervision when using the Easyhaler

The maximum daily dose (in 24 hours) for both adults and children: 4 puffs of the 200 mcg (800 micrograms).

If you use more Easyhaler Salbutamol than you should

If you have taken more puffs than recommended, you should contact your doctor immediately. You may notice that your heart is beating faster than usual and that you feel shaky. These effects usually wear off in a few hours.

If you forget to use Easyhaler Salbutamol

If you forget to take a dose do not worry. Take your next dose when it is due or if you become wheezy. Do not take a double dose to make up for a forgotten dose.

If you have any further questions on the use of this medicine, ask your doctor, pharmacist or nurse.

The instructions on how to use the inhaler are at the end of the leaflet.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them.

If you experience any of the following side effects, stop taking Easyhaler Salbutamol and seek immediate medical attention:

- itching, rash or reddened skin
- swelling of the eye lids, lips, face or throat
- low blood pressure or collapse
- increase in wheezing and shortness of breath immediately after dosing.

Other side effects**Common side effects (may affect up to 1 in 10 people)**

- feeling a bit shaky
- increased or uneven heart rate
- increased blood flow to your extremities.

Uncommon side effects (may affect up to 1 in 100 people)

- headache.

Rare side effects (may affect up to 1 in 1,000 people)

- cough, mouth and throat irritation (these may be prevented by rinsing the mouth with water and spitting it out after inhalation)
- decrease in the level of potassium in your blood
- muscle cramps
- restlessness, dizziness, behavioural difficulties.

Very rare side effects (may affect up to 1 in 10,000 people)

- angina (chest pain), heart attack (myocardial ischemia)
- sleep disturbances.

Reporting of side effects

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effect directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store. By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Easyhaler Salbutamol

- Keep this medicine out of the sight and reach of children.
- Before the first use store in the unopened foil bag.
- After opening the foil bag, do not store above 25°C and protect from moisture. It is recommended to keep the Easyhaler in its protective cover.
- If your Easyhaler Salbutamol gets damp, you will need to replace it with a new one.
- Replace your Easyhaler Salbutamol with a new one no later than 6 months after you open the foil bag. Write down the date you opened the bag to help you remember.

Do not use this medicine after the expiry date which is stated on the label and carton. The expiry date refers to the last day of that month.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.

6. Contents of the pack and other information**What Easyhaler Salbutamol contains**

- The active substance is salbutamol sulfate
- The other ingredient is lactose (which contains milk protein).

What Easyhaler Salbutamol looks like and contents of the pack

White or almost white inhalation powder.

Easyhaler multidose powder inhaler contains 200 doses (puffs).

Packages:

200 doses in plastic multidose powder inhaler

200 doses in plastic multidose powder inhaler and protective cover

A protective cover is also available separately.

How to use the Easyhaler inhaler

About your Easyhaler

Easyhaler Salbutamol may be different to inhalers you have used in the past. Therefore it is very important that you use it properly as using incorrectly can lead to you not receiving the right amount of medicine. This could make you very unwell or could lead to your asthma not being treated as it should.

Your doctor, nurse or pharmacist will show you how to use your inhaler properly. Make sure you understand the correct way to use the inhaler. If you are unsure contact your doctor, nurse or pharmacist. As with all inhalers, caregivers should ensure that children prescribed Easyhaler Salbutamol use correct inhalation technique, as described below. You can also use the instruction video at www.oeh.fi/sgb.

When you first get your Easyhaler

The Easyhaler comes in a foil bag. Do not open the foil bag until you are ready to start using the medicine as it helps to keep the powder dry in the inhaler.

When you are ready to start treatment open the bag and record the date e.g., in your calendar.

Use the inhaler within 6 months of removing from the foil bag.

HOW TO USE CORRECTLY

Step 1: SHAKE

- Remove the dustcap
- Shake the inhaler **3 to 5** times holding it in the **upright position**

SHAKE x 3-5

Important points to remember

- It is important to keep the inhaler in the upright position
- If you accidentally click while you shake the inhaler, empty the powder from the mouthpiece as shown below

Step 2: CLICK • Keep holding the inhaler upright between your forefinger and thumb • Press down until you hear a click, and let the inhaler click back again. This releases a dose • Only click down once	CLICK x 1 	Important points to remember • The inhaler will not click if the dustcap is still on • Only click down once • If you accidentally click more than once, empty the powder from the mouthpiece, see below • Click to release dose before you inhale, not at the same time • Keep the inhaler upright when you click it and when you inhale the dose. If you tip it, the powder could fall out before you are able to inhale it
--	---	---

Step 3: INHALE • Keep holding the inhaler upright • Breathe out normally • Place the mouthpiece in your mouth between your teeth and close your lips tightly around the mouthpiece • Take a strong and deep breath in • Take the inhaler out of your mouth, hold breath for at least 5 seconds, then breathe out normally.	INHALE 	Important points to remember • Make sure the whole mouthpiece is well inside your mouth, so that the medication gets into your lungs • Make sure your lips make a good seal around the mouthpiece • Do not breathe out into the inhaler. This is important: it could clog up the inhaler. If you breathed out into the inhaler, empty the powder from mouthpiece, see below
---	--	---

If you need to take another inhalation, please repeat the steps 1-3 Shake-Click-Inhale.

After you have used the inhaler:

- Put the dust cap back on the mouthpiece. It stops the inhaler going off by accident.

How to empty the powder from the mouthpiece

If you click the inhaler by accident, or if you might have clicked it more than once, or if you breathe out into it, empty the mouthpiece.

- Tap the mouthpiece to empty the powder onto a table top, or the palm of your hand.
- Then start again with steps Shake-Click-Inhale.

Cleaning the Easyhaler

Keep your inhaler dry and clean. If necessary you may wipe the mouthpiece of your inhaler with a dry cloth or tissue. Do not use water: the powder in the Easyhaler is sensitive to moisture.

Using the Easyhaler with a protective cover

You may use a protective cover with your inhaler. This helps to improve durability of the product. When you first insert your inhaler in the protective cover make sure the dustcap is on the inhaler as this stops it going off by accident. You can use the inhaler without removing it from the protective cover.

Follow the same instructions as above, **1. Shake – 2. Click – 3. Inhale.**

Remember to:

- Keep the inhaler in the upright position when clicking it
- Replace the dustcap after taking the dose as this stops the inhaler going off by accident.

When to switch to a new Easyhaler

The dose counter shows the number of remaining doses. The counter turns after every 5th click. When the dose counter starts turning red, there are 20 doses left.

If you do not already have a new Easyhaler, contact your doctor for a new prescription. When the counter reaches 0 (zero), you need to replace the Easyhaler.

If you use the protective cover, you can keep it and insert your new inhaler into it.

**Remember**

- **1. Shake – 2. Click – 3. Inhale.**
- Do not get your inhaler wet, protect it from moisture.

If you have any further questions on the use of this product, ask your doctor or pharmacist.
