Midazolam 1 mg/ml, 2 mg/ml, 5 mg/ml

2. CONTENTS OF THE PACK AND OTHER INFORMATION

- Information leaflet
- Vials of midazolam solution for injection / infusion

3. HOW TO USE MIDAZOLAM

Midazolam should only be given to a doctor or nurse. It will be given to you in a dose that the prescriber has specified. The right dose is chosen by the prescriber after taking into account your age, weight, general health and your response to treatment, and whether you are going to be given other medicines at the same time.

After being given Midazolam

- Do not drive or use tools or machines. After your treatment, you must be observed and be able to help yourself before you are given any of the following medicines:
  - Opioid medicines or opioids (such as morphine)
  - Sedatives
  - Tranquilizers (for anxiety or to help you sleep)
  - Hypnotics (to help you sleep)
  - Medicines for depression

In particular, tell your doctor or nurse if you are taking any of the following medicines:

- Do not use Midazolam:
  - If you are allergic to other benzodiazepine medicines, such as diazepam or nitrazepam.
  - Before and during a medical test or procedure where you need to be awake.
  - Babies under 6 months of age. However, if the doctor believes it is safe it may be useful for babies under 6 months who is in intensive care.

If you are given Midazolam for a long time, such as in intensive care, it is very important that you talk to your doctor before you stop being given the medicine. This is because Midazolam is not recommended for use in children under 6 months.

- After being given Midazolam

- You may have to report to a doctor or nurse at the end of the treatment. The doctor will give you any further information you need or about the results of your treatment.

- After being given Midazolam

- You may have to report to a doctor or nurse at the end of the treatment. The doctor will give you any further information you need or about the results of your treatment.
