Cetirizine Hayfever and Allergy Relief 10 mg Tablets
(Cetirizine hydrochloride)

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.
This medicine is available without prescription. However, you still need to use Cetirizine Hayfever and Allergy Relief 10 mg Tablets carefully to get the best results from it.
Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- You must contact a doctor if your symptoms worsen or do not improve after 3 days.
- If you get any side effects talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

What is this in the leaflet:
1. What Cetirizine Hayfever and Allergy Relief 10 mg Tablets are and what they are used for
2. What you need to know before you take Cetirizine Hayfever and Allergy Relief 10 mg Tablets
3. How to take Cetirizine Hayfever and Allergy Relief 10 mg Tablets
4. Possible side effects
5. How to store Cetirizine Hayfever and Allergy Relief 10 mg Tablets
6. Content of the pack and other information

1. WHAT CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS ARE AND WHAT THEY ARE USED FOR
Cetirizine hydrochloride is the active ingredient of Cetirizine Hayfever and Allergy Relief 10 mg Tablets. Cetirizine Hayfever and Allergy Relief 10 mg Tablets is an antihistamine medication.
In adults and children aged 6 years and above, Cetirizine Hayfever and Allergy Relief 10 mg Tablets are indicated for the relief of symptoms of hay fever (seasonal allergic rhinitis) and allergies such as dust or pet allergies (perennial allergic rhinitis), such as sneezing, itchy, runny and blocked nose, itchy, red and watery eyes.
- for the relief of swelling, redness and itchiness of the skin (symptoms of chronic idiopathic urticaria, which is also known as chronic nettle rash).

2. WHAT YOU NEED TO KNOW BEFORE YOU TAKE CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS
Do not take Cetirizine Hayfever and Allergy Relief 10 mg Tablets
- if you have a severe kidney disease (severe renal failure with creatinine clearance below 10 ml/min).
- if you are known to be allergic (hypersensitive) to the active substance of Cetirizine Hayfever and Allergy Relief 10 mg Tablets or any of the other ingredients of these tablets (these are listed below, in section 6 “Further information”).
- if you are known to be allergic (hypersensitive) to drugs from the piperazine family, for example buclizine, cyclizine, medoxomil, levocetirizine.

Warnings and precautions
Talk to your or pharmacist doctor before taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets:
If you have kidney problems, please ask your doctor for advice; if necessary, you may have to take a lower dose. The new dose will be determined by your doctor.
If you have predisposition factors of urinary retention (eg: spinal cord lesion, prostatic hyperplasia) as cetirizine increases the risk of urinary retention, please ask your doctor for advice.
If you are an epileptic patient or a patient at risk of convulsions, you should ask your doctor for advice.

Children
Do not give this medicine to children below the age of 6 years because the tablet formulation does not allow the necessary dose adjustments.

Other medicines and Cetirizine Hayfever and Allergy Relief 10 mg Tablets
Please tell your doctor or pharmacist if you are taking or have recently taken or might take any other medicines, including medicines obtained without a prescription.
Due to the profile of cetirizine, no interactions with other drugs are expected.

Taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets with food and drink
Food does not noticeably affect the absorption of cetirizine.

Pregnancy and breast-feeding
If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine.
Cetirizine Hayfever and Allergy Relief 10 mg Tablets should be avoided in pregnant women.
Accidental use of the drug by a pregnant woman should not produce any harmful effects on the fetus. Nevertheless, the medicine should only be administered if necessary and after medical advice.
Cetirizine passes into breast milk. Therefore, you should not take Cetirizine Hayfever and Allergy Relief 10 mg Tablets during breast-feeding unless you have contacted a doctor.

Allergy skin test
If you are going to have an allergy skin test stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets at the recommended dose.
You should closely observe your response to the drug after you have taken Cetirizine Hayfever and Allergy Relief 10 mg Tablets for three days before the test. This medicine may affect your allergy test results.

Driving and using machines
Clinical studies have produced no evidence of impaired attention, alertness and driving capabilities after taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets at the recommended dose.
You should closely observe your response to the drug after you have taken Cetirizine Hayfever and Allergy Relief 10 mg Tablets if you are intending to drive, engage in potentially hazardous activities or operate machinery. You should not exceed the recommended dose. If you are a sensitive patient, you may find that the simultaneous use of alcohol or other nervous depressant agents may additionally affect your attention and ability to react.

Cetirizine Hayfever and Allergy Relief 10 mg Tablets contains lactose.
Cetirizine Hayfever and Allergy Relief 10 mg Tablets contain lactose; if you have been told by your doctor that you have an intolerance to some sugars, please contact your doctor before taking this medicinal product.

3. HOW TO TAKE CETIRIZINE HAYFEVER AND ALLERGY RELIEF 10 MG TABLETS
Always take Cetirizine Hayfever and Allergy Relief 10 mg Tablets exactly as your doctor has told you. Check with your doctor if you are not sure.
Tablets need to be swallowed with a glass of liquid.
Children aged 6 to 12 years
The recommended dose is 5 mg twice daily as half a tablet twice a day.
Adults and children aged 12 years and over:
The recommended dose is 10 mg once daily as one tablet.

Patients with moderate to severe renal impairment:
Patients with moderate renal impairment are recommended to take 5 mg once daily as a half tablet.

If you suffer from severe kidney disease, please contact your doctor or pharmacist who may adjust the dose accordingly.

If you feel that the effect of Cetirizine Hayfever and Allergy Relief 10 mg Tablets is too weak or too strong, please consult your doctor.

Duration of treatment:
The duration of treatment depends on the type, duration and course of your complaints. Please ask your doctor or pharmacist for advice.

If you take more Cetirizine Hayfever and Allergy Relief 10 mg Tablets than you should:
If you think you have taken an overdose of Cetirizine Hayfever and Allergy Relief 10 mg Tablets, please inform your doctor. Your doctor will then decide what measures, if any, should be taken.

After an overdose, the side effects described below may occur with increased intensity.

Adverse effects such as confusion, diaphoresis, dizziness, tiredness, headache, aching, dilating (widening) of the pupil, titching, restlessness, sedation, somnolence, stupor, abnormal rapid heart rate, tremors and urinary retention have been reported.

If you forget to take Cetirizine Hayfever and Allergy Relief 10 mg Tablets:
If you forget to take a tablet, take it as soon as you remember, but wait at least 24 hours before taking the next tablet. Do not take a double dose to make up for a forgotten dose.

If you stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets:
Rarely, pruritus (intense itching) and/or urticaria may return if you stop taking Cetirizine Hayfever and Allergy Relief 10 mg Tablets.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS
Like all medicines, Cetirizine Hayfever and Allergy Relief 10 mg Tablets can cause side effects, although not everybody gets them.

In very rare cases people have thought about committing suicide and if you feel this way then stop taking the tablets and see your doctor.

If you develop one of the very rare side effects described below, please inform your doctor straight away.

At the first signs of a severe allergic (hypersensitivity) reaction symptoms include: rash, itchiness and fever, difficulty breathing, swelling of the neck, throat, tongue, face, eyelids or lips stop taking the tablets and contact your doctor immediately.

This reaction may start soon after you first take the medicine or it might start later. Your doctor will then assess the severity and decide on any further measures that may be necessary.

The following side effects have also been reported.
