Clomid® 50mg Tablets

Is this leaflet hard to see or read? Phone 01483 505515 for help

Read all of this leaflet carefully before you start taking this medicine.

• Keep this leaflet. You may need to read it again.
• If you have any further questions, ask your doctor or pharmacist.
• This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if they have the same condition as you.
• If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

In this leaflet:
1. What Clomid is and what it is used for
2. Before you take Clomid
3. How to take Clomid
4. Possible side effects
5. How to store Clomid
6. Further Information

1. What Clomid is and what it is used for

Clomid contains a medicine called clomifene citrate. This belongs to a group of medicines called ovulation stimulants. It works by stimulating the release of eggs from the ovary (ovulation). Clomid is used for some types of infertility, in women who are not ovulating properly.

2. Before you take Clomid

Before you take the medicine talk to your doctor about the risks of:

- Pregnancy

- You are pregnant. You should have your doctor check for other pregnancies before starting treatment with Clomid.
- You have a cyst on your ovary (see section 4 below).
- You are likely to get over-stimulation of your ovaries if Clomid is used for the first time or if ovulation does not happen after three courses you have taken Clomid.
- You have or ever had liver disease
- You have or ever had bowel disease
- You have or ever had limb or chest pain
- You have or ever had diabetes
- You have or ever had a varicose vein
- You are taking another medicine that can affect your eyesight such as blurred vision while taking this medicine. If this happens, do not drive or use any tools or machines.
- You have unusual menstrual bleeding

- If you have had cancer in the past

- You have or ever had kidney disease
- You have or ever had heart disease
- You have or ever had mouth (mucous membrane) disorder
- You have or ever had hepatitis

- You should talk to your doctor about the possible risks before you take Clomid.

3. How to take Clomid

Always take Clomid exactly as your doctor has told you. You should check with your doctor or pharmacist if you are not sure.

Taking this medicine
• Take this medicine by mouth.
• Swallow the tablets whole with a drink of water. Do not crush or chew your tablets.

Taking other medicines
• Do not take more than two tablets in one day
• Do not take the tablets for more than five days at a time
• If you feel the effect of your medicine is not working, do not change the dose yourself, but ask your doctor.

The usual dose is:

• Adults only: Your doctor will tell you when in your menstrual cycle to start taking the tablets.
• For the first course of treatment, take one tablet a day for five days.
• If you do not have a period after the first course of treatment your doctor will increase your dose to two tablets a day for five days.
• You should start this second course at least 30 days after the first course.
• You will not usually take more than three courses of treatment.

• If ovulation does not happen after three courses talk to your doctor.

This medicine should not be taken by children, adolescents, men or women who have already gone through the menopause (post-menopausal).

4. Possible side effects

If you are not sure if any of the above apply to you, talk to your doctor or pharmacist before taking Clomid.

Taking other medicines

Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines. This includes medicines you buy with a prescription, including herbal medicines. This is because Clomid can affect the way some of your other medicines work. Also some medicines can affect the way Clomid works.

Pregnancy and breast-feeding
• Do not take this medicine if you are pregnant or think you may be pregnant
• Talk to your doctor before taking this medicine if you are breast-feeding or planning to breast-feed. Clomid can lower the amount of milk produced.

Ask you doctor or pharmacist for advice before taking any medicine if you are pregnant or breast-feeding.

Driving and using machines

You may notice problems with your eyesight such as blurred vision while taking this medicine. If this happens, do not drive or use any tools or machines.

Important information about some of the ingredients of Clomid

This medicine contains lactose and sucrose, which are types of sugar. If you have been told by your doctor that you cannot tolerate some sugars, talk to your doctor before taking Clomid.

5. How to store Clomid

If you forget to take Clomid

If you forget a dose, talk to your doctor as you may need to change your treatment cycle. Do not take a double dose to make up for a forgotten tablet.

If you stop taking Clomid

Keep taking Clomid until your doctor tells you to stop. If you stop, the treatment may not work.

If you have any further questions on the use of this product, ask your doctor or pharmacist.
4. Possible side-effects

Like all medicines, Clomid can cause side effects, although not everybody gets them.

Stop taking Clomid and see your doctor or go to a hospital straight away if:
- You have an allergic reaction. The signs may include: a rash, swelling or breathing problems, swelling of your lips, face, throat or tongue
- You have numbness, weakness or paralysis on one side of your body, slurred speech, sudden blurred vision, confusion or unsteadiness.
These could be signs of a stroke.

Stop taking Clomid and see a doctor straight away if you notice any of the following serious side-effects - you may need urgent medical treatment:
- Over-stimulation of the ovaries. This can lead to pain in the pelvis, stomach or calf, swelling or feeling bloated, passing less urine, difficulty in breathing or an increase in weight. If this happens, your doctor may lower your dose of Clomid.
- Blurring of vision or spots or flashes in front of the eyes. These symptoms usually get better but in some cases they may be permanent.
- Your doctor may send you for an eye examination.
- Liver problems that may cause the eyes or skin to go yellow (jaundice)
- Sudden and severe headaches
- Mental illness such as 'psychosis'.

Tell your doctor or pharmacist if any of the following side effects get serious or last longer than a few days:
- Increased pain with periods, heavy periods or bleeding between periods
- Pain in the lower part of the stomach. This could be a sign of endometriosis or ovarian cancer or enlarged ovaries
- Thinning of the layer covering the inside of the uterus.
- Increased levels of fat in the blood (hypertriglyceridaemia) which may also cause inflammation of the pancreas.
- Pain in the upper middle or upper left part of the abdomen. This could be a sign of inflammation of the pancreas (pancreatitis).
- Cloudy lenses in the eye (cataracts)
- Fits, feeling faint, disorientated or feeling tired or difficulty in sleeping (insomnia), depression or change in moods or behaviour
- Rapid or irregular heartbeat
- Speech problems
- Skin rash or itching
- Feeling or being sick
- Flu样ing of the skin
- Headaches
- Swelling of the face, around the eyes, lips or tongue
- Painful breasts
- Hair loss or thinning
- Increased levels of liver enzymes shown up in blood tests. This can mean that your liver is not working properly.
- Numbness or tingling on your skin (parasthesia)
- Feeling anxious
- Feeling more nervous than usual. There have been rare reports of ovarian cancer with fertility drugs. Some studies suggest that prolonged use of clomifene may increase this risk. Therefore the recommended duration of treatment should not be exceeded.

Talk to your doctor or pharmacist if any of the side effects gets serious or lasts longer than a few days or if you notice any side effects not listed in this leaflet.

Reporting of side effects

If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in the leaflet. You can also report side effects directly via the Yellow Card Scheme at:
www.mhra.gov.uk/yellowcard.

By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Clomid

Keep out of the reach and sight of children.
Store in original container below 25°C.
Do not use Clomid after the expiry date which is stated on the carton. The expiry date refers to the last day of that month.
Medicines should not be disposed of via wastewater or household waste.
Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.

6. Further information

What Clomid contains
- Each tablet contains 50mg of the active substance, clomifene citrate
- The other ingredients are sucrose, lactose, soluble starch, maize starch, magnesium stearate, iron oxide yellow (E172), purified water.

What Clomid looks like and contents of the pack

Clomid 50mg Tablets are beige and round marked with M in two circles. They are supplied in PVC and aluminium blister packs. Pack sizes 30 or 100 tablets.
