

Write your treatment and doctor's details below:

Start date of taking Namuscla: _____

Patient Name: _____

Patient contact details: _____

Doctor's Name: _____

Doctor's contact number: _____

What else do I need to know?

Your doctor should perform tests to check on your heart and electrolyte levels before and after starting mexiletine. The heart tests should include a heart wave tracing (electrocardiogram or ECG). If you have any heart problems or are at risk of developing them then you may need closer monitoring particularly after increases in the dose of mexiletine. Please follow your doctor's instructions.

Do not take more than 3 capsules of Namuscla a day, do not take a double dose to make up for a forgotten dose.

Where can I get more information?

See the Namuscla package leaflet for more information or contact
