

Reporting side effects:

If you get any side effects, talk to your doctor, pharmacist, or nurse. This includes any possible side effects not listed in the package leaflet. You can also report side effects directly to the MHRA via the Yellow Card Scheme via www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the [Google Play Store](#) or [Apple App Store](#) for free. Alternatively, you can call 0800 731 6789 for free, Monday to Friday between 9am and 5pm, you can leave a message outside of these hours. Side effects should also be reported to UCB Pharma Ltd via UCBcares@ on (+44) 01753 777100 or 0800 279 3177 (freephone) or by email UCBcares.UK@ucb.com.

When reporting please provide as much information as possible. By reporting side effects, you can help provide more information on the safety of this medicine.

IMPORTANT INFORMATION FOR
PATIENTS AND THEIR CAREGIVERS

Evenity helps strengthen bones and helps reduce the risk of breaking bones. Like all medicines, there is a risk of developing side effects. These may include:

 Low levels of calcium in the blood (hypocalcaemia)

During Evenity treatment, tell your doctor if you develop:

- Spasms, twitches, or cramps in your muscles.
- Numbness or tingling in your fingers, toes or around your mouth.

Take calcium and vitamin D supplements to help prevent low calcium levels as instructed, if these are prescribed by your doctor.

Tell your doctor if you have or have ever had severe kidney problems, kidney failure or have needed dialysis.

 Problems with your mouth, teeth or jaw

There have been rare reports of osteonecrosis of the jaw (ONJ; bone damage in the jaw) in patients who have received Evenity. It is important to try to prevent ONJ developing, as it may be a painful condition that can be difficult to treat.

To reduce the risk of ONJ, during treatment:

- Maintain good oral hygiene and receive routine dental check-ups.
- Make sure dentures fit properly if you wear them.
- Inform your doctor of any planned dental treatment or dental surgery (e.g. tooth extractions).
- Inform your dentist you are being treated with Evenity prior to any dental treatment.

Contact your doctor and dentist immediately if you develop any problems with your mouth or teeth, such as:

- Loose teeth.
- Pain or swelling.
- Mouth sores that do not heal.
- Discharge.

 Heart attack and stroke

Heart attack and stroke have been reported in people receiving Evenity.

Do not take Evenity if you have had a heart attack or stroke.

Seek immediate medical attention if you get:

- Chest pain
- Shortness of breath
- Headache
- Numbness, or weakness in your face, arms or legs
- Difficulty talking
- Changes in vision
- Loss of balance

Your doctor will carefully evaluate the risk of cardiovascular problems before he/she lets you start treatment with Evenity. Tell your doctor if you know that you have an increased risk of cardiovascular problems such as established cardiovascular disease, high blood pressure, high blood fat levels, diabetes, smoking or kidney problems.

IMPORTANT INFORMATION FOR
HEALTHCARE PROFESSIONALS

This patient is being treated with Evenity (romosozumab).

MYOCARDIAL INFARCTION (MI) AND STROKE were observed in patients receiving Evenity.

- History of MI or stroke is a contraindication.
- Discontinue Evenity if a patient experiences MI or stroke during therapy.

TRANSIENT HYPOCALCAEMIA was observed in patients receiving Evenity.

- Hypocalcaemia is a contraindication.
- Adequately supplement patients with calcium and vitamin D.
- Monitor patients for signs and symptoms of hypocalcaemia, and measure serum calcium levels if hypocalcaemia is suspected.
- In patients with severe renal impairment or receiving dialysis, calcium levels should be monitored.

OSTEONECROSIS OF THE JAW (ONJ) has been reported rarely in patients receiving Evenity.

- Encourage patients to maintain good oral hygiene, receive routine dental check-ups, and promptly report oral symptoms.
- Refer patients suspected of having ONJ to a dentist or an oral surgeon with expertise in ONJ.
- Consider discontinuing Evenity until the condition resolves and contributing risk factors are mitigated where possible.

 Healthcare professionals can view information on key risks and their management on the website:
