Read all of this leaflet carefully before you start taking this medicine.

- Keep this leaflet. You may need to read it again.
- This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours.
- If you have any further questions, ask your doctor or pharmacist.
- If you have any of the side effects, or if you notice any not listed, please tell your doctor or pharmacist.

In this leaflet:
1. **What Digoxin tablets are and what they are used for**
   - Digoxin belongs to a group of medicines called cardiac glycosides, these slow down the rate of the heart but increase the force with which the heart muscle contracts, making the heart work more efficiently. Digoxin tablets are used to:
     - heart failure
     - irregular heart beats or heart rhythm.

2. **Before you take Digoxin tablets**
   - Do not take Digoxin tablets if you:
     - are allergic (hypersensitive) to Digoxin tablets, other related medicines such as digitoxin, or any of the ingredients in the table (see section 6). An allergic reaction may include a rash, itching, difficulty breathing or swelling of the face, lips, throat or tongue. If this is the first time you have prescribed this medicine for you, tell them if you have taken any cardiac glycoside (such as digoxin, digitin) within the last two weeks.
     - have any serious heart problems such as inflammation of the heart, enlargement of the heart muscle, problems in conduction of the electrical impulses in the heart or irregular heart beats including Wolff-Parkinson-White syndrome. Although digoxin is used to treat serious heart problems, it may make others worse.

Check with your doctor or pharmacist before taking Digoxin tablets if you:
   - have any serious lung or breathing disorders
   - have been told you have a low blood potassium or magnesium level, or a high blood calcium level
   - have suffered a recent heart attack
   - have any stomach or bowel problems
   - suffer from abnormal heart rhythm
   - have congestive heart failure or heart problems such as cardiac amyloidosis, myocarditis, constrictive pericarditis
   - have Beri-Beri disease
   - are going to have a heart test called an ECG (electrocardiogram)
   - have a thyroid disease
   - have malabsorption syndrome
   - have a sinusoidal disorder, e.g. Sick Sinus Syndrome.

Taking other medicines
Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription. Especially:
   - the herbal remedy St Johns Wort (Hypericum perforatum)
   - medicines to treat high blood pressure (epoprostenol, carvedilol, telmisartan, prazosin, captopril, rifampicin, nicoxdipine, verapamil, diltiazem, nifedipine, hydralazine, acetazolamide, furosemide, triamterene, spironolactone, amiloride)
   - medicines to treat irregular heart rhythms (dronedarone, amiodarone, disopyramide, flecainide, moricizine, propafenone, quinidine)
   - medicines to treat heart conditions (mironine, beta blockers; propranolol or atenolol)
   - sandalwood (to treat angina)
   - medicines treating allergic reactions/shock/heart attack (adrenaline/epinephrine, noradrenaline/norepinephrine, atropine, dobutamine)
   - ticagrelor (to prevent blood clots)
   - medicines to lower cholesterol (atorvastatin, colestipol, colesterylamine)
   - medicines to treat arthritis (sulfasalazine, penicillamine, chloroquine, hydroxychloroquine)
   - kaolin (for stomach upsets), laxatives (for constipation), metoclopramide (to treat feeling and being sick), antacids (for indigestion)
   - medicines to treat bacterial infections (tetracycline, gentamicin, azithromycin, clarithromycin, erythromycin, tetracythromycin, neomycin, rifampicin, trimethoprim) or fungal infections (amphotericin,itraconazole, ketoconazole)
   - medicines to treat HIV (atazanavir, darunavir, indinavir, lopinavir, nevirapine, ritonavir, saquinavir, tipranavir)
   - taleprevir (to treat hepatitis C)
   - nefazodone, trazodone, lithium (for depression), alprazolam, diazepam (for anxiety)
   - acarbose (for diabetes)
   - phenytoin, topiramate (for epilepsy)
   - quinine (to treat malaria or night-time leg cramps)
   - calcium salts (calcium carbonate or calcium lactate), vitamin D
   - carbamazepine (for epilepsy)
   - ciclosporin (to reduce organ transplant rejection)
   - corticosteroids (prednisolone, hydrocortisone)
   - medicines used to treat cancer (lapatinib)
   - medicines to treat organ transplant rejection (cyclosporin, tacrolimus)
   - medicines to treat heart rhythm disorders (amiodarone, disopyramide, flecainide, moricizine, propafenone, quinidine)
   - medicines known as Non-Steroidal Anti-inflammatory Drugs (NSAIDs) used to treat pain (aspirin, ibuprofen, diclofenac, fentanyl, indomethacin, ibuprofen, ibuprofen, phenylbutazone)
   - salsalate (for asthma)
   - carbamazepine, oxcarbazepine, pantothenate, rabeprazole, sulphasalazine (for stomach ulcers)
   - tolvaptan, conivaptan (used in kidney disease)
   - bupropion (to aid stopping smoking)
   - nutritional supplements feed into the body through a tube

62.5, 125 & 250mcg x 28’s (UK)

3. How to take Digoxin tablets
Always take Digoxin tablets exactly as your doctor has told you. If you are not sure, check with your doctor or pharmacist.

Swallow the tablets whole with water at the same time each day. Take this medicine for as long as your doctor tells you to take it, but never stop to do so without their advice.

The first time you take Digoxin tablets, your doctor will ask you to take a certain number of tablets as a single dose, this is called the initial dose. They will monitor your response which may involve a blood test.

This initial dose is followed by a maintenance daily dose. This might be a different number of tablets depending on how you respond. Your doctor might recommend that you take this maintenance dose in divided doses.

The usual doses are:
- Adults and children over 10 years: initial dose is either between 25 and 45micrograms per kg of bodyweight over a 24 hour period (this will depend on the child’s age). Depending on the child’s response the doctor will decide upon the best maintenance response.
- Elderly or patients with kidney, thyroid or bowel disorders: different doses will be given depending on the condition.

If you take more Digoxin tablets than you should
If you (or someone else) swallow a lot of the tablets all together, or if you think a child has swallowed any of the tablets, contact your nearest hospital casualty department, or your doctor, immediately. Take any remaining doses will be given depending on the condition.

If you forget to take Digoxin tablets
If you forget to take a dose, take one as soon as you remember, unless it is nearly time to take the next one. Never take two doses together. Take the remaining doses at the correct time. If you are worried ask your pharmacist or doctor for advice.

4. Possible side effects
Like all medicines, Digoxin tablets can cause side effects, although not everybody gets them.

Stop taking the tablets, and tell your doctor immediately or contact the casualty department at your nearest hospital if the following occur:
- allergic reaction: skin rash, which might be itchy and/or red and swelling of the mouth, tongue and throat causing difficulty swallowing or breathing
- palpitations, chest pain, shortness of breath or sweating. These can be symptoms of a serious heart problem caused by new irregular heartbeats

Other side effects may include:
- Common (may affect up to 1 in 10 people)
  - rash, urticaria
  - abdominal heart beat
  - nausea, vomiting, diarrhoea
  - central nervous system disturbances such as dizziness
  - visual disturbances
- Uncommon (may affect up to 1 in 100 people)
  - depression

Rare (may affect up to 1 in 1,000 people)
- changes in the number and type of certain blood cells. If you notice unusual bruising, nose bleeds or infections you should tell your doctor

Very rare (may affect up to 1 in 10,000 people)
- decrease in blood platelets (symptoms include bruises and nose bleeds)
- loss of appetite (anorexia)
- psychosis, apathy, confusion
- headache
- stomach pain caused by lack of blood supply or damage to your intestines (ischaemia and necrosis)
- enlarged breast tissue in men (gynaecomastia)

Reporting of side effects
If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard or search for MHRA Yellow Card in the Google Play or Apple App Store.

By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Digoxin tablets
Keep out of the sight and reach of children.
Store below 25°C in a dry place, and in the original packaging. Do not use Digoxin tablets after the expiry date stated on the label/carton/bottle. The expiry date refers to the last day of that month.

Other treatment or surgery
If you need an operation or other treatment, make sure you tell the doctor you are taking digoxin.

6. Further information
What Digoxin tablets contain
- The active substance (the ingredient that makes the tablets work) is digoxin. Each tablet contains either 62.5microgram (blue uncoated tablet), 125microgram & 250microgram (white uncoated tablets) of the active ingredient.
- The other ingredients are lactose, magnesium stearate, maize starch and pregelatinised maize starch (all 3 strengths), stearic acid (250microgram only), indigo carmine (E132) (62.5microgram only).

Contents of the pack
Digoxin tablets are available in pack size of 28
